

TFT COLOR LCD MODULE

NL12876AC18-03D

27cm (10.6 Type) WXGA LVDS interface (1port)

PRELIMINARY DATA SHEET DOD-MDA-0566 (2nd edition)

This PRELIMINARY DATA SHEET is updated document from DOD-MDA-0538.

All information is subject to change without notice. Please confirm the sales representative before starting to design your system.

INTRODUCTION

The Copyright to this document belongs to NLT Technologies, Ltd. (hereinafter called "NLT"). No part of this document will be used, reproduced or copied without prior written consent of NLT.

NLT does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NLT.

Some electronic parts/components would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NLT, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three quality grades: "Standard", "Special", and "Specific" of the highest grade of a quality assurance program at the choice of a customer. Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard quality grade is required to contact an NLT sales representative in advance.

The **Standard** quality grade applies to the products developed, designed and manufactured in accordance with the NLT standard quality assurance program, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses are, directly or indirectly, free of any damage to death, human bodily injury or other property, like general electronic devices.

Examples: Computers, office automation equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment, industrial robots, etc.

The **Special** quality grade applies to the products developed, designed and manufactured in accordance with an NLT quality assurance program stricter than the standard one, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses might directly cause any damage to death, human bodily injury or other property, or such application under more severe condition than that defined in the Standard quality grade without such direct damage.

Examples: Control systems for transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, medical equipment not specifically designed for life support, safety equipment, etc.

The **Specific** quality grade applies to the products developed, designed and manufactured in accordance with the standards or quality assurance program designated by a customer who requires an extremely higher level of reliability and quality for such products.

Examples: Military systems, aircraft control equipment, aerospace equipment, nuclear reactor control systems, medical equipment/devices/systems for life support, etc.

The quality grade of this product is the "Standard" unless otherwise specified in this document.

1. OUTLINE

1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL12876AC18-03D is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color (Red, Green, Blue) data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing circuit, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

1.2 APPLICATION

• For industrial use

1.3 FEATURES

- Ultra Wide viewing angle (Adoption of Ultra-Advanced Super Fine TFT (UA-SFT))
- Narrow frame
- LED backlight type
- LED driver Built-in (Wide input voltage range)
- Wide temperature range
- LVDS interface
- Reversible-scan direction
- Selectable 8bit or 6bit digital signals for data of RGB
- Replaceable lamp holder for backlight
- ColorXcell technology (Color Enhancement)

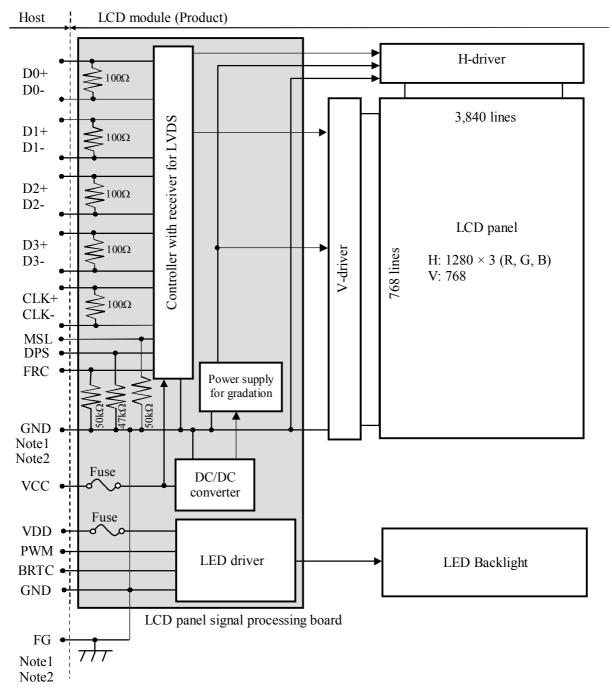

2. GENERAL SPECIFICATIONS

| Display area | 230.4 (H) × 138.24 (V) mm | |
|----------------------------|---|--|
| Diagonal size of display | 27cm (10.6 inches) | |
| Drive system | a-Si TFT active matrix | |
| Display color | 16,777,216 colors (At 8-bit input, FRC terminal= High) 262,144 colors (At 6-bit input, FRC terminal= Low or Open) | |
| Pixel | 1280 (H) × 768 (V) pixels | |
| Pixel arrangement | RGB (Red dot, Green dot, Blue dot) vertical stripe | |
| Dot pitch | 0.06 (H) × 0.18 (V) mm | |
| Pixel pitch | $0.18 (H) \times 0.18 (V) mm$ | |
| Module size | 248.8 mm (W) (typ.) × 155.8 mm (H) (typ.) × 6.5 (D) mm (typ.) | |
| Weight | 270 g (typ.) | |
| Contrast ratio | 1000:1 (typ.) | |
| Viewing angle | At the contrast ratio ≥10:1 • Horizontal: Right side 88° (typ.), Left side 88° (typ.) • Vertical: Up side 88° (typ.), Down side 88° (typ.) | |
| Designed viewing direction | Viewing angle with optimum grayscale (γ=2.2): Normal axis (perpendicular) | |
| Polarizer surface | Anti glare | |
| Polarizer pencil-hardness | 3H (min.) [by JIS K5600] | |
| Color gamut | At LCD panel center 40% (typ.) [against NTSC color space] | |
| Response time | Ton+Toff (10% \leftrightarrow 90%) 25ms (typ.) | |
| Luminance | At the maximum luminance control 300cd/m^2 (typ.) | |
| Signal system | LVDS 1port (Receiver: THC63LVDF84B, THine Electronics Inc. or equivalent) [8bit/6bit digital signals for data of RGB colors, Dot clock (CLK), Data enable (DE), Selection of LVDS input map (MSL)] | |
| Power supply voltage | LCD panel: 3.3V LED backlight: 5V to 12V | |
| Backlight | LED backlight type (Replaceable part • Lamp holder set: Type No. TBD) | |
| Power consumption | At the maximum luminance control, VDD=12.0V, Checkered flag pattern (3.2) W (typ.) | |

3. BLOCK DIAGRAM

Note1: Relations between GND (Signal ground and LED driver ground) and FG (Frame ground) in the LCD module are as follows.

 GND - FG
 Connected

Note2: GND and FG must be connected to customer equipment's ground, and it is recommended that these grounds be connected together in customer equipment.

4. DETAILED SPECIFICATIONS

4.1 MECHANICAL SPECIFICATIONS

| Parameter | Specification | | Unit |
|--------------|---|-------|------|
| Module size | $248.8 \pm 0.5 \text{ (W)} \times 155.8 \pm 0.5 \text{ (H)} \times 6.5 \pm 0.5 \text{ (D)}$ | Note1 | mm |
| Display area | 230.4 (H) × 138.24 (V) | Note1 | mm |
| Weight | 270(typ.), 295(max.) | | g |

Note1: See "8. OUTLINE DRAWINGS".

4.2 ABSOLUTE MAXIMUM RATINGS

| | Parameter | | Symbol | Rating | Unit | Remarks |
|-------------------|----------------------------|----------------|--------|-----------------|------------------|---|
| Power supply | LCD | panel | VCC | -0.3 to +4.0 | V | |
| voltage | LED c | lriver | VDD | -0.3 to 15.0 | | |

Note3: Common mode voltage for LVDS receiver

4.3.2 Backlight

| | | | | | | | (Ta= 25°C) |
|-----------------------|------------------|--------|------|-------|-------------|--------------|-----------------------|
| Parameter | r | Symbol | min. | typ. | max. | Unit | Remarks |
| Power supply voltage | 2 | VDD | 4.75 | - | 12.6 | V | Note1 |
| Power supply current | : | IDD | - | (160) | (195) Note2 | mA | at VCC=12.0V Note6 |
| | Note3 | IDD | - | TBD | TBD Note2 | mA | at VCC= 5.0V Note6 |
| Permissible ripple vo | ltage | VRPD | - | - | 100 | mVp-p | for VDD |
| Input voltage for | High | VDFH1 | 2.0 | - | 5.0 | V | |
| PWM signal | Low | VDFL1 | 0 | - | 0.8 | V | - |
| Input voltage for | High | VDFH2 | 2.0 | - | VDD | V | |
| BRTC signal Low | | VDFL2 | 0 | - | 0.8 | V | - |
| PWM freque | f _{PWM} | (100) | - | (500) | Hz | Note4, Note5 | |
| PWM pulse v | tPWH | (20) | - | - | μs | - | |

Note1: When designing of the power supply, take the measures for the prevention of surge voltage.

Note2: This value excludes peak current such as overshoot current.

Note3: The power supply lines (VDD and GND) may have ripple voltage during luminance control of LED. There is the possibility that the ripple voltage produces acoustic noise and signal wave noise in audio circuit and so on. Put a capacitor between the power supply lines (VDD and GND) to reduce the noise if necessary.

Note4: A recommended f_{PWM} value is as follows.

$$f_{PWM} = \frac{2n-1}{4} \times fv$$

(n = integer, fv = frame frequency of LCD module)

Note5: Depending on the frequency used, so noise may appear on the screen, please conduct a thorough evaluation.

Note6: At the maximum luminance control.

4.3.3 Power supply voltage ripple

This product works, even if the ripple voltage levels are over the permissible values as the following table, but there might be noise on the display image.

| Power supp | ly voltage | Ripple voltage Note1 (Measure at input terminal of power supply) | Unit | |
|------------|---------------|---|-------|---|
| VCC | 3.3V | ≤ 100 | mVp-p | |
| VDD | 5.0V to 12.0V | ≤ 100 | mVp-p | 2 |

Note1: The permissible ripple voltage includes spike noise.

4.3.4 Fuse

| Parameter | | Fuse | Rating | Fusing current | Remarks | |
|------------|-------------|-----------------|--------|----------------|---------|--|
| 1 arameter | Туре | Supplier | Rating | Tusing current | Remarks | |
| VCC | FCC16202AB | KAMAYA ELECTRIC | 2A | 4A | | |
| 100 | 10010202111 | CO., LTD | 36V | 17 1 | Note1 | |
| VDD | TBD | TBD | TBD | TBD | inoter | |
| 100 | 100 | TEE | TBD | TDD | | |

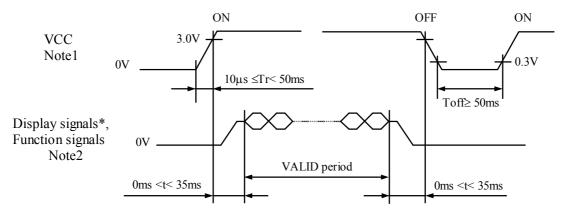

Note1: The power supply's rated current must be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

2

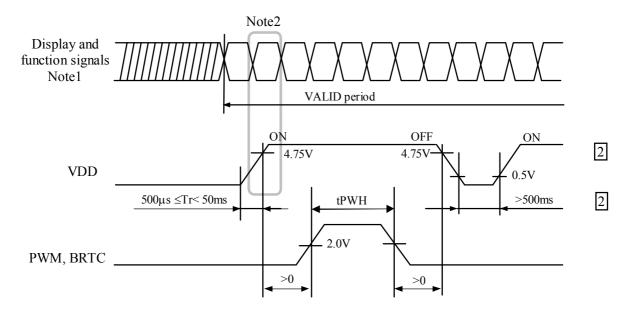

4.4 POWER SUPPLY VOLTAGE SEQUENCE

4.4.1 LCD panel

- * These signals should be measured at the terminal of 100Ω resistance.
- Note1: If there is a voltage variation (voltage drop) at the rising edge of VCC below 3.0V, there is a possibility that a product does not work due to a protection circuit.
- Note2: Display signals (D0+/-, D1+/-, D2+/-, D3+/- and CLK+/-) and function signals (DPS, FRC, and MSL) must be set to Low or High-impedance, except the VALID period (See above sequence diagram), in order to avoid the circuitry damage.
 If some of display and function signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. If a customer stops the display and function signals, VCC also must be shut down.
- 4.4.2 LED Driver

- Note1: These are the display and function signals for LCD panel.
- Note2: The LED driver should be turned on within the valid period of display and function signals, in order to avoid unstable data display.

NLT Technologies, Ltd.

NLT Technologies, Ltd.

4.6 DISPLAY COLORS AND INPUT DATA SIGNALS

4.6.1 Combinations of input data signals, FRC and MSL signal

This product can display 16,777,216 colors equivalent with 256 gray scales and 262,144 colors with 64 gray scales by combination of input data signals and FRC and MSL signal. See the following table.

| Combination | Input data signals | Input Data mapping | CN1- Pin No.24 and 25 | FRC terminal | MSL terminal | Display colors | Remarks |
|-------------|--------------------------|-----------------------|--------------------------|--------------|--------------|-------------------|---------|
| 1 | 8 bit | Map A | D3+/- | High | Low | 16,777,216 | Note1 |
| 2 | 8 bit | Map B | D3+/- | High | High | 16,777,216 | Note1 |
| 3 | 6 bit | - | GND | Low or open | Low | 262,144 | Note2 |

Note1: See "4.6.2 16,777,216 colors".

Note2: See "4.6.3 262,144 colors".

NLT Technologies, Ltd.

4.6.2 16,777,216 colors

This product can display 16,777,216 colors equivalent with 256 gray scales by combination ① or ②. (See "**4.6.1 Combinations of input data signals, FRC and MSL signal**".) Also the relation between display colors and input data signals is as follows.

| Display | colors | Data signal (0: Low level, 1: High level) | | | | | | | | | | | | | | | | | | | | | | | |
|------------------|--------------|---|--------|--------|--------|--------|--------|--------|--------|---|------|------|------|----|----|--------|--------|----|--------|--------|--------|--------|--------|--------|--------|

| NT / 1 | Note1: These are initial characteristics | | | | | | | | |

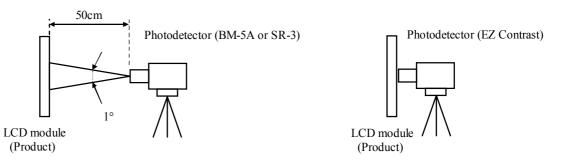

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

Ta= 25°C, VCC= 3.3V, VDD=12.0V, PWM: Duty 100%,

Display mode: WXGA, Horizontal cycle= 1/47.396kHz, Vertical cycle= 1/59.995Hz, DPS= Low or Open: Normal scan

Optical characteristics are measured at luminance saturation 20minutes after the product works, in the dark room. Also measurement methods are as follows.

- Note3: See "4.10.2 Definition of contrast ratio".
- Note4: See "4.10.3 Definition of luminance uniformity".
- Note5: These coordinates are found on CIE 1931 chromaticity diagram.
- Note6: Product surface temperature: TopF= TBD°C
- Note7: See "4.10.4 Definition of response times".
- Note8: See "4.10.5 Definition of viewing angles".

4.10.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

Contrast ratio (CR) = Luminance of white screen Luminance of black screen

4.10.3 Definition of luminance uniformity

The luminance uniformity is calculated by using following formula.

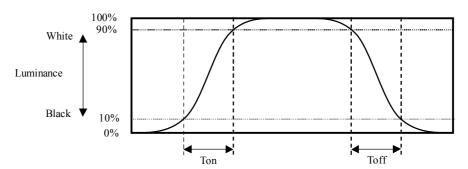

Luminance uniformity (LU) = <u>Maximum luminance from ① to ⑤</u> <u>Minimum luminance from ① to ⑤</u>

The luminance is measured at near the 5 points shown below.

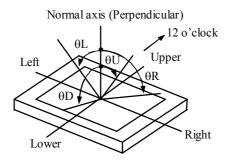

| | 213 | 640 | 1067 |
|------|-----|-----|--------|
| 128 | 1 | | 2 |
| 120 | Ť | | T I |
| 384 | | 3 | |
| 504 | | • | |
| 640 | 4 | | 5 |
| 0.10 | | | Ť |

4.10.4 Definition of response times

Response time is measured at the time when the luminance changes from "black" to "white ", or "white" to "black " on the same screen point, by photo-detector. Ton is the time when the luminance changes from 10% up to 90%. Also Toff is the time when the luminance changes from 90% down to 10% (See the following diagram.).

4.10.5 Definition of viewing angles

5. ESTIMATED LUMINANCE LIFETIME

The luminance lifetime is the time from initial luminance to half-luminance.

This lifetime is the estimated value, and is not guarantee value.

| | Estimated luminance lifetime (Life time expectancy) Note1, Note2, Note3 | Unit | |
|--------------------------|---|--------|---|
| LED elementary substance | 25°C (Ambient temperature of the product) Continuous operation, PWM Duty :100% | 30,000 | h |

Note1: Life time expectancy is mean time to half-luminance.

Note2: Estimated luminance lifetime is not the value for an LCD module but the value for LED elementary substance.

Note3: By ambient temperature, the lifetime changes particularly. Especially, in case the product works under high temperature environment, the lifetime becomes short.

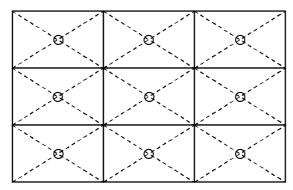

6. RELIABILITY TESTS

| Test item | Condition | Judgment Note1 | |
|---|---|--|--|
| High temperature and humidity (Operation) | +60 ± 2°C, RH= 90%, 240hours Display data is white. | | |
| High temperature (Operation) | +70 ± 3°C, 240hours Display data is white. | | |
| Heat cycle (Operation) | -20 ± 3°C1hour +70 ± 3°C1hour 50cycles, 4hours/cycle Display data is white | | |
| Thermal shock (Non operation) | -30 ± 3°C30minutes +80 ± 3°C30minutes 100cycles, 1hour/cycle Temperature transition time is within 5 minutes. | No display malfunctions | |
| ESD (Operation) | 150pF, 150Ω, ±10kV 9 places on a panel surface Note2 10 times each points at 1 sec interval | | |
| Dust (Operation) | Sample dust: No. 15 (by JIS-Z8901) 15 seconds stir 8 times repeat at 1 hour interval | | |
| Vibration (Non operation) | 5 to 100Hz, 19.6m/s² 1 minute/cycle X, Y, Z directions 30 times each directions | No display malfunctions No physical damages | |
| Mechanical shock (Non operation) | (1) 539m/s², 11ms (2) ±X, ±Y, ±Z directions (3) 5 times each directions | FJoren anna900 | |

Note1: Display and appearance are checked under environmental conditions equivalent to the inspection conditions of defect criteria.

Note2: See the following figure for discharge points.

7. PRECAUTIONS

7.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. Be sure to read "7.2 CAUTIONS" and "7.3 ATTENTIONS"!

This sign has the meaning that a customer will be injured or the product will sustain damage if the customer practices wrong operations.

This sign has the meaning that a customer will be injured if the customer practices wrong operations.

7.2 CAUTIONS

* Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: Equal to or no greater than 539m/s² and equal to or no greater than 11ms, Pressure: Equal to or no greater than 19.6 N (\$\phi16mm jig)\$)

7.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② When the product is put on the table temporarily, display surface must be placed downward.
- ③ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- (4) The torque for product mounting screws must never exceed 0.23N·m. Higher torque might result in distortion of the bezel. And the length of product mounting screws must be ≤ 2.5 mm.
- ⑤ The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura.
- O not press or rub on the sensitive product surface. When cleaning the panel surface, wipe it with a soft dry cloth.
- ⑦ Do not push or pull the interface connectors while the product is working. When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.
- ③ Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal by any chance, please wash it away with soap and water.

7.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurred by temperature difference, the product packing box must be opened after enough time being left under the environment of an unpacking room. Evaluate the storage time sufficiently because dew condensation is affected by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with the original packing state after a customer receives the package)
- ③ Do not operate in high magnetic field. If not, circuit boards may be broken.
- ④ This product is not designed as radiation hardened.

7.3.3 Characteristics

The following items are neither defects nor failures.

- ① Characteristics of the LCD (such as response time, luminance, color uniformity and so on) may be changed depending on ambient temperature. If the product is stored under condition of low temperature for a long time, it may cause display mura. In this case, the product should be operated after enough time being left under condition of operating temperature.
- ② Display mura, flickering, vertical streams or tiny spots may be observed depending on display patterns.
- ③ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- ④ The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑤ Optical characteristics may be changed depending on input signal timings.

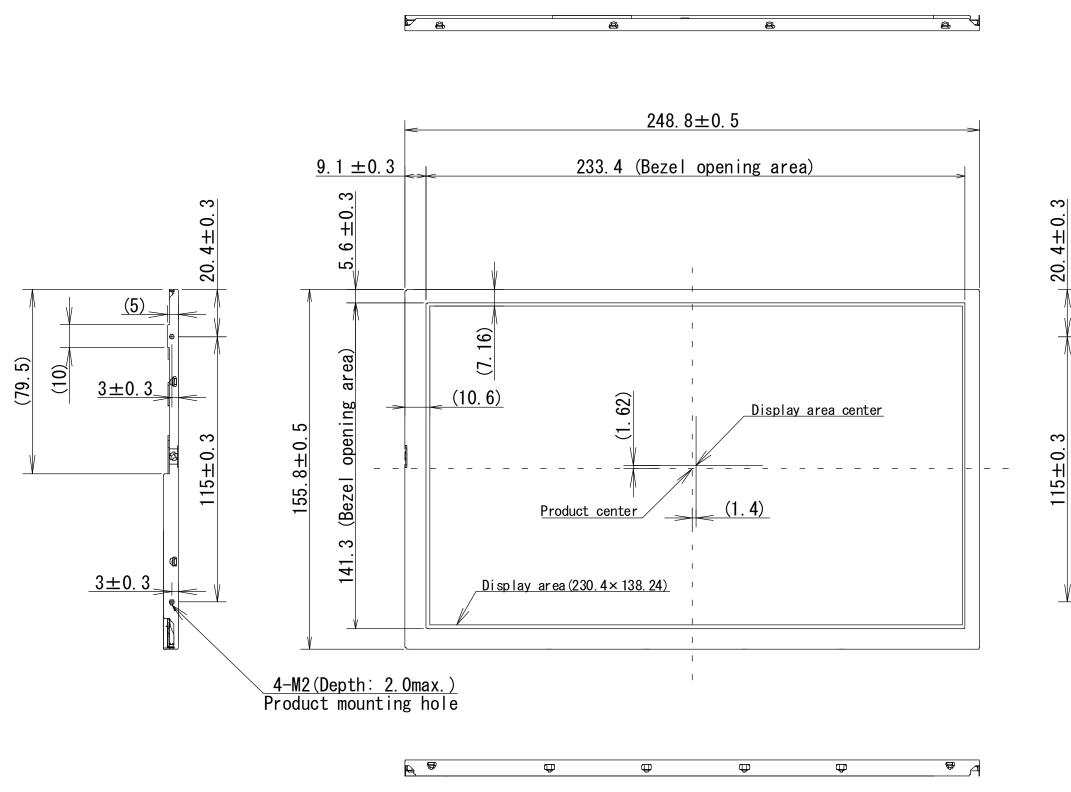

7.3.4 Others

- ① All GND, VCC and VDD terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ See "REPLACEMENT MANUAL FOR LAMP HOLDER SET", when replacing lamp holder set.
- ④ Pack the product with the original shipping package, in order to avoid any damages during transportation, when returning the product to NLT for repairing and so on.

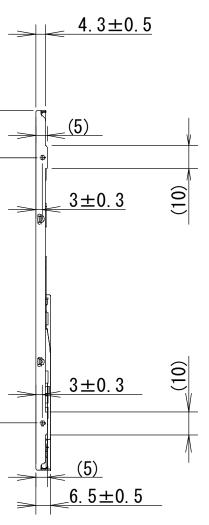

8. OUTLINE DRAWINGS

8.1 FRONT VIEW

Note1: The values in parentheses are for reference.

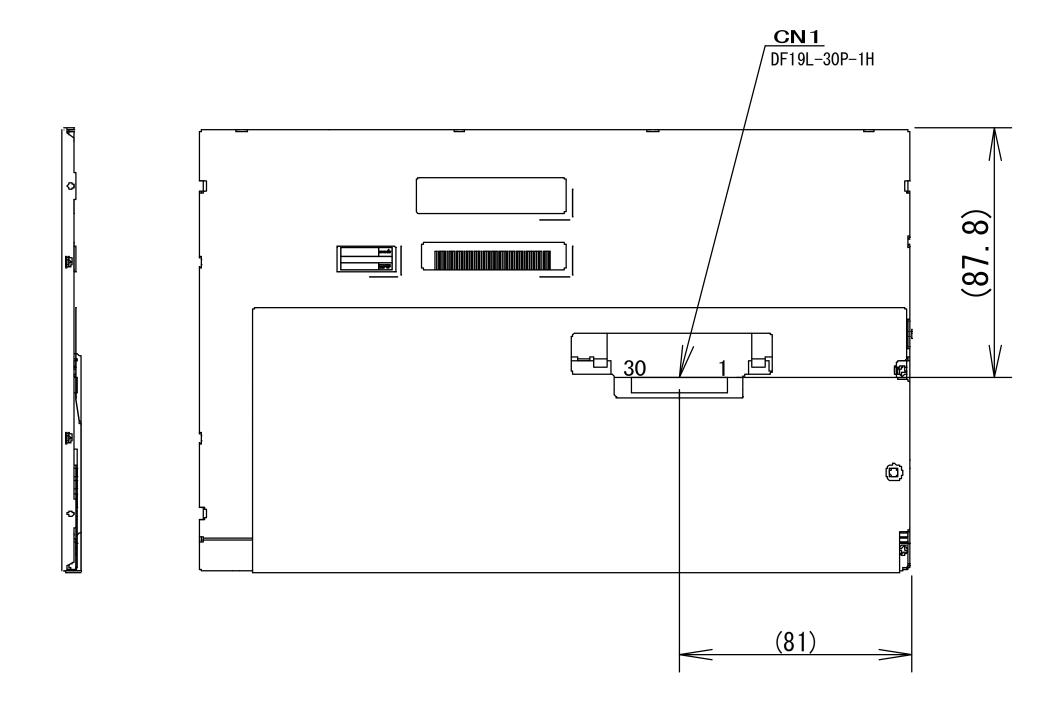

Note2: The torque for product mounting screws must never exceed 0.23N·m. And the length of product mounting screws must be ≤ 2.0 mm.

Unit: mm
