## INTRODUCTION

The Copyright to this document belongs to NLT Technologies, Ltd. (hereinafter called "NLT"). No part of this document will be used, reproduced or copied without prior written consent of NLT.

NLT does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NLT.

Some electronic parts/components would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NLT, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three quality grades: "**Standard**", "**Special**", and "**Specific**" of the highest grade of a quality assurance program at the choice of a customer. Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard quality grade is required to contact an NLT sales representative in advance.

The **Standard** quality grade applies to the products developed, designed and manufactured in accordance with the NLT standard quality assurance program, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses are, directly or indirectly, free of any damage to death, human bodily injury or other property, like general electronic devices.

Examples: Computers, office automation equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment, industrial robots, etc.

The **Special** quality grade applies to the products developed, designed and manufactured in accordance with an NLT quality assurance program stricter than the standard one, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses might directly cause any damage to death, human bodily injury or other property, or such application under more severe condition than that defined in the Standard quality grade without such direct damage.

Examples: Control systems for transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, medical equipment not specifically designed for life support, safety equipment, etc.

The **Specific** quality grade applies to the products developed, designed and manufactured in accordance with the standards or quality assurance program designated by a customer who requires an extremely higher level of reliability and quality for such products.

Examples: Military systems, aircraft control equipment, aerospace equipment, nuclear reactor control systems, medical equipment/devices/systems for life support, etc.

The quality grade of this product is the "**Standard**" unless otherwise specified in this document.

### 1. OUTLINE

#### 1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL204153AC21-17 is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

#### 1.2 APPLICATION

- Color monitor system

#### 1.3 FEATURES

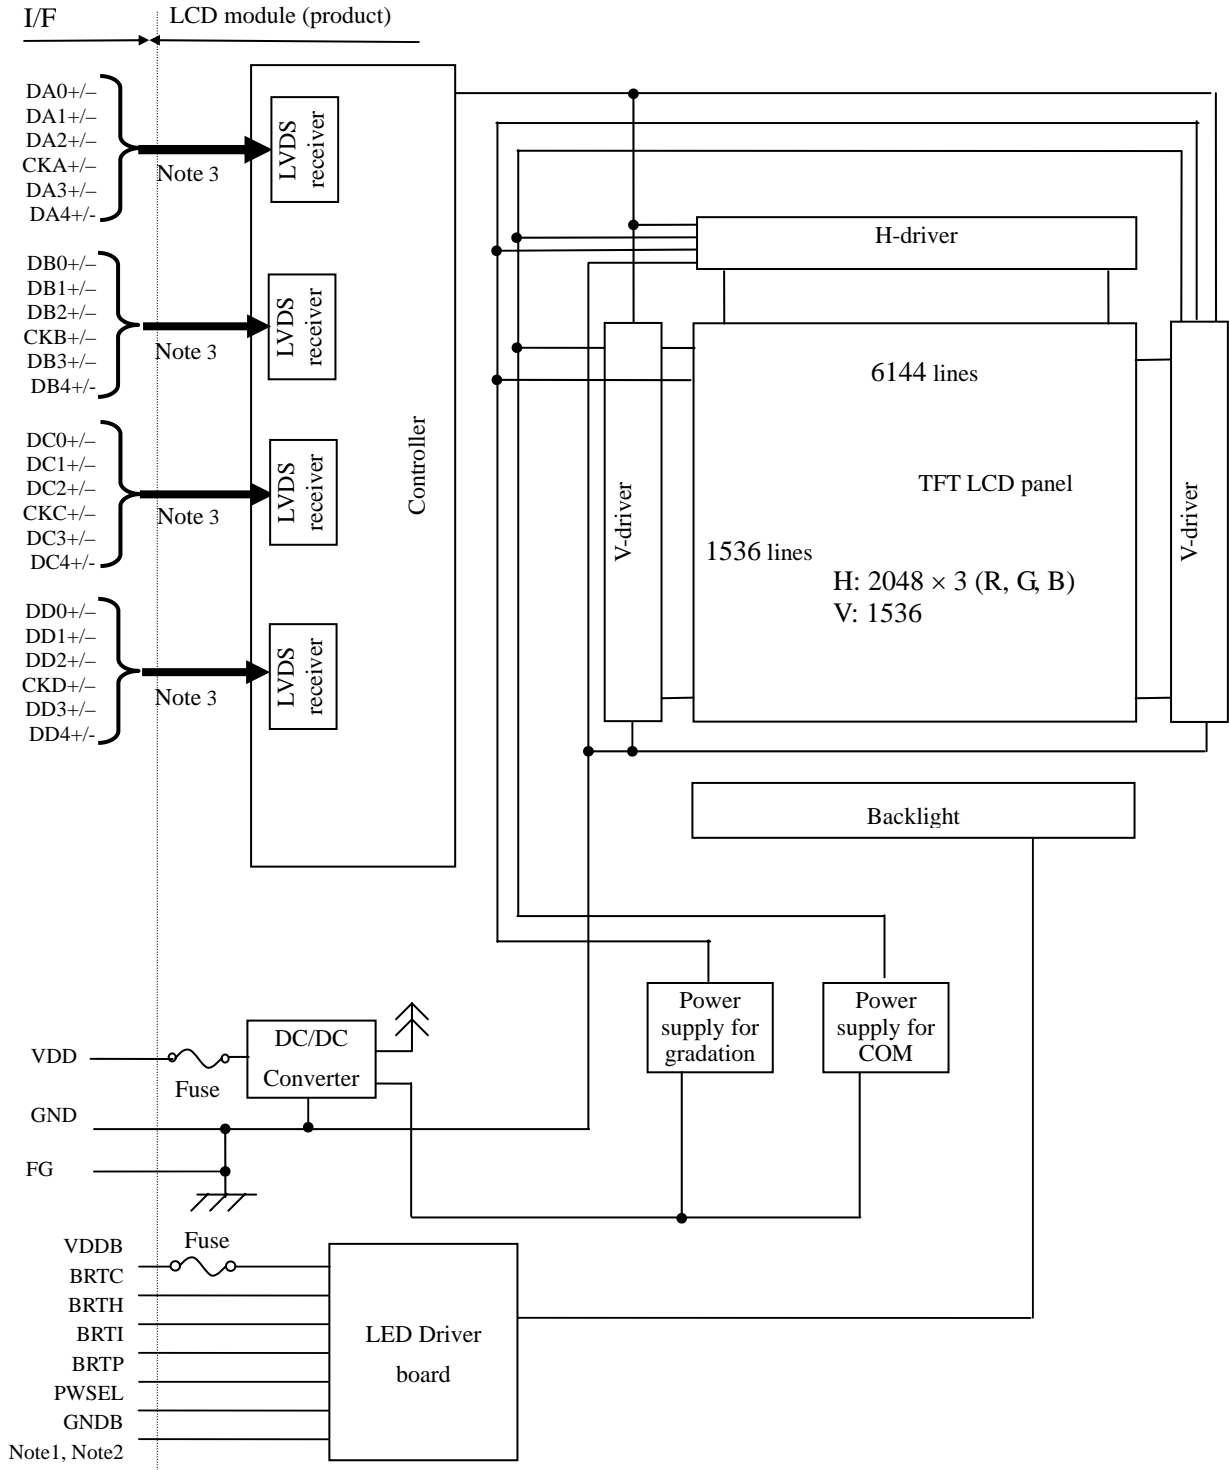

- Ultra-wide viewing angle (Adoption of Ultra-Advanced Super Fine TFT (UA-SFT))
- Wide color gamut
- High luminance
- High contrast
- Low reflection
- 1,024 gray scale in each R, G, B sub-pixel (10-bit), 1,073,741,824 colors
- LVDS interface
- Selectable LVDS data input map
- Small foot print
- Long life LED backlight type with an LED driver board

## 2. GENERAL SPECIFICATIONS

<b>Display area</b>	433.152 (H) × 324.864 (V) mm
<b>Diagonal size of display</b>	54cm (21.3 inches)
<b>Drive system</b>	a-Si TFT active matrix
<b>Display color</b>	1,073,741,824 colors
<b>Pixel</b>	2,048 (H) × 1,536 (V) pixels (1 pixel consists of 3 sub-pixels (RGB).)
<b>Pixel arrangement</b>	RGB (Red dot, Green dot, Blue dot) vertical stripe
<b>Sub-pixel pitch</b>	0.0705 (H) × 0.2115 (V) mm
<b>Pixel pitch</b>	0.2115 (H) × 0.2115 (V) mm
<b>Module size</b>	457.0 (W) × 350.0 (H) × 21.5 (D) mm (typ.)
<b>Weight</b>	(2,700)g (typ.)
<b>Contrast ratio</b>	1,400:1 (typ.)
<b>Viewing angle</b>	At the contrast ratio ≥ 10:1 <ul style="list-style-type: none"> <li>• Horizontal: Right side 88° (typ.), Left side 88° (typ.)</li> <li>• Vertical: Up side 88° (typ.), Down side 88° (typ.)</li> </ul>
<b>Designed viewing direction</b>	Viewing angle with optimum grayscale ( $\gamma \approx$ DICOM): normal axis (perpendicular) Note1
<b>Polarizer surface</b>	Antiglare
<b>Polarizer pencil-hardness</b>	2H (min.) [by JIS K5600]
<b>Color gamut</b>	At LCD panel center (72) % (typ.) [against NTSC color space]
<b>Response time</b>	$T_{on} + T_{off}$ (10% ← → 90%) (40)ms (typ.)
<b>Luminance</b>	At the maximum luminance control 800cd/m <sup>2</sup> (typ.)
<b>Signal system</b>	4 ports LVDS interface (THC63LVD104S×2pcs, THine Electronics, Inc. or equivalent) [RGB 10-bit signals, Data enable signal (DE), Dot clock (CK)]
<b>Power supply voltage</b>	LCD panel signal processing board: 12.0V LED driver board: 12.0V
<b>Backlight</b>	LED backlight type with LED driver board
<b>Power consumption</b>	At checkered flag pattern, the maximum luminance control (58)W (typ.)

Note1: When the product luminance is 450cd/m<sup>2</sup>, the gamma characteristic is designed to  $\gamma \approx$  DICOM.

### 3. BLOCK DIAGRAM

Note1: Relations between GND (Signal ground), FG (Frame ground) and GNDB (LED driver board ground) in the LCD module are as follows.

GND - FG	Connected
GND - GNDB	Not connected
FG - GNDB	Not connected

Note2 GND, FG and GNDB must be connected to customer equipment's ground, and it is recommended that these grounds be connected together in customer equipment.

Note3 Each pair of the LVDS signal has a 100Ω terminating resistance between D+ and D-.

# PRELIMINARY

## 4. DETAILED SPECIFICATIONS

### 4.1 MECHANICAL SPECIFICATIONS

Parameter	Specification	Unit
Module size	457.0 ±1.0 (W) × 350.0 ±1.0 (H) × 21.5 (typ., D) 23.0 (max. D)	Note1, Note2 mm
Display area	433.152 (H) × 324.864 (V)	Note2 mm
Weight	(2,700) (typ.), (2,980) (max.)	g

Note1: Excluding warpage of the cover for LED driver board.

Note2: See "8. OUTLINE DRAWINGS".

### 4.2 ABSOLUTE MAXIMUM RATINGS

Parameter		Symbol	Rating	Unit	Remarks	
Power supply voltage	LCD panel signal processing board	VDD	-0.3 to +14.0	V	-	
	LED driver board	VDDDB	-0.3 to +15.0	V		
Input voltage for signals	LCD panel signal processing board Note1	V <sub>i</sub>	-0.3 to +2.8	V	VDD= 12.0V	
	LED driver board	BRTI signal	VBI	-0.3 to +1.5	V	VDDDB= 12.0V
		BRTP signal	VBP	-0.3 to +5.5	V	
		BRTC signal	VBC	-0.3 to +5.5	V	
	PWSEL signal	VBS	-0.3 to +5.5	V		
Storage temperature		T <sub>st</sub>	-20 to +60	°C	-	
Operating temperature	Front surface	TopF	(0 to +60)	°C	Note2	
	Rear surface	TopR	(0 to +60)	°C	Note3	
Relative humidity Note4		RH	≤ 95	%	T <sub>a</sub> ≤ 40°C	
			≤ 85	%	40°C < T <sub>a</sub> ≤ 50°C	
			≤ 70	%	50°C < T <sub>a</sub> ≤ 55°C	
Absolute humidity Note4		AH	≤ 73 Note5	g/m <sup>3</sup>	T <sub>a</sub> > 55°C	
Operating altitude		-	≤ 4,850	m	0°C ≤ T <sub>a</sub> ≤ 55°C	
Storage altitude		-	≤ 13,600	m	-20°C ≤ T <sub>a</sub> ≤ 60°C	

Note1: DA0+/-, DA1+/-, DA2+/-, DA3+/-, DA4+/-, CA+/-, DB0+/-, DB1+/-, DB2+/-, DB3+/-, DB4+/-, CKB+/-, DC0+/-, DC1+/-, DC2+/-, DC3+/-, DC4+/-, CKC+/-, DD0+/-, DD1+/-, DD2+/-, DD3+/-, DD4+/-, CKD+/-, BSEL.

Note2: Measured at LCD panel surface (including self-heat)

Note3: Measured at LCD module's rear shield surface (including self-heat)

Note4: No condensation

Note5: Water amount at T<sub>a</sub>= 55°C and RH= 70%

## 4.3 ELECTRICAL CHARACTERISTICS

### 4.3.1 LCD panel signal processing board

(Ta= 25°C)

Parameter	Symbol	min.	typ.	max.	Unit	Remarks	
Power supply voltage	VDD	10.8	12.0	13.2	V	-	
Power supply current	IDD	-	(590) Note1	(980) Note2	mA	at VDD= 12.0V	
Permissible ripple voltage	VRP	-	-	100	mVp-p	for VDD	
Differential input threshold voltage	High	VTH	-	-	+100	mV	at VCM= 1.2V Note3, Note4
	Low	VTL	-100	-	-	mV	
Input voltage swing	VI	0	-	2.4	V	Note4	
Terminating resistance	RT	-	100	-	Ω	-	

Note1: Checkered flag pattern (by EIAJ ED-2522)

Note2: Pattern for maximum current

Note3: Common mode voltage for LVDS driver

Note4: DA0+/-, DA1+/-, DA2+/-, DA3+/-, DA4+/-, CKA+/-, DB0+/-, DB1+/-, DB2+/-, DB3+/-, DB4+/-, CKB+/-, DC0+/-, DC1+/-, DC2+/-, DC3+/-, DC4+/-, CKC+/-, DD0+/-, DD1+/-, DD2+/-, DD3+/-, DD4+/-, CKD+/-

2

### 4.3.2 LED Driver board

(Ta= 25°C)

Parameter		Symbol	min.	typ.	max.	Unit	Remarks
Power supply voltage		VDDB	(11.4)	12.0	(12.6)	V	-
Power supply current		IDDB	-	(4,200)	TBD	mA	VDDDB= 12.0V, At the maximum luminance control
Input voltage for signals	BRTI signal		VBI	0	-	1.0	V
	BRTP signal	High	VBPH	2.0	-	5.25	V
		Low	VBPL	0	-	0.8	V
	BRTC signal	High	VBCH	2.0	-	5.25	V
		Low	VBCL	0	-	0.8	V
	PWSEL signal	High	VBSH	2.0	-	5.25	V
Low		VBSL	0	-	0.8	V	
Input current for signals	BRTI signal		IBI	TBD	-	TBD	μA
	BRTP signal	High	IBPH	-	-	TBD	μA
		Low	IBPL	TBD	-	-	μA
	BRTC signal	High	IBCH	-	-	TBD	μA
		Low	IBCL	TBD	-	-	μA
	PWSEL signal	High	IPSH	-	-	TBD	μA
Low		IPSL	TBD	-	-	μA	

2

### 4.3.3 LED Driver board current wave

2

At the maximum luminance control: 100%  
 At the minimum luminance control: (1)% (At frequency: 325 Hz)  
 Luminance control frequency: (255)Hz (typ.)

2

Note1: Luminance control frequency indicate the input pulse frequency, when select the external pulse control. See "**4.6.2 Detail of BRTP timing**".

Note2: The power supply lines (VDDB and GNDB) have large ripple voltage during luminance control. There is the possibility that the ripple voltage produces acoustic noise and signal wave noise in audio circuit and so on. Put a capacitor (5,000 to 6,000μF) between the power supply lines (VDDB and GNDB) to reduce the noise, if the noise occurred in the circuit.

### 4.3.4 Power supply voltage ripple 2

This product works, even if the ripple voltage levels are beyond the permissible values as following the table, but there might be noise on the display image.

Power supply voltage		Ripple voltage (Measure at input terminal of power supply)	Note1	Unit
VDD	12.0V	≤ 100		mVp-p
VDDDB	12.0V	≤ 200		mVp-p

Note1: The permissible ripple voltage includes spike noise.

Example of the power supply connection

a) Separate the power supply

b) Put in the filter

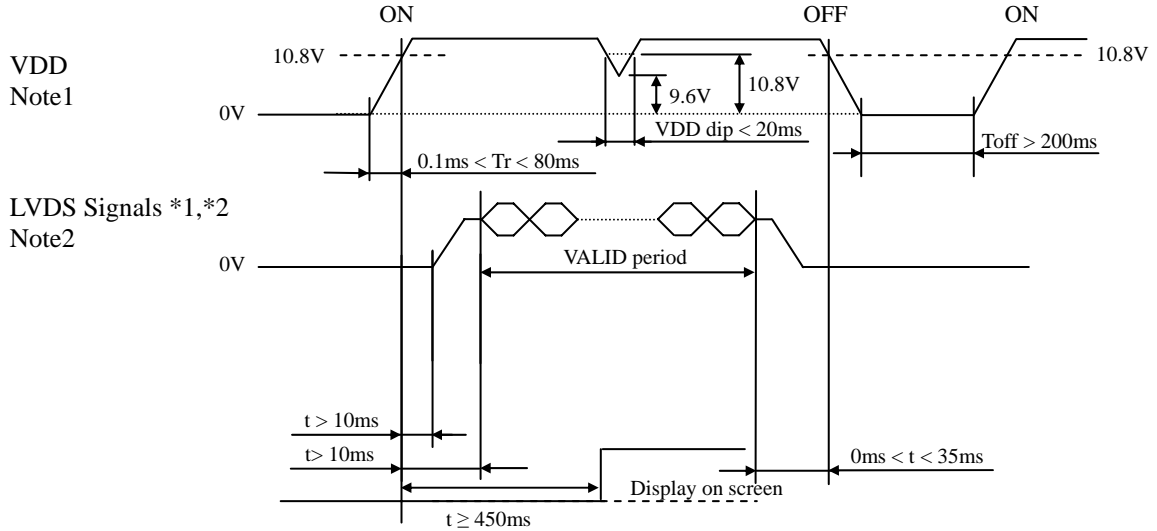

### 4.3.5 Fuse 2

Parameter	Fuse		Rating	Fusing current	Remarks
	Type	Supplier			
VDD	FCC16202AB	KAMAYA ELECTRIC Co., Ltd.	2.0A	4.0A, 5 seconds maximum	Note1
			32V		
VDDDB	CCF1N10	KOA Corporation	10A	20 A, 1 seconds maximum	
			60 V		

Note1: The power supply capacity should be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

## 4.4 POWER SUPPLY VOLTAGE SEQUENCE

### 4.4.1 LCD panel signal processing board

\*1: DA0+/-, DA1+/-, DA2+/-, DA3+/-, DA4+/-, CKA+/-, DB0+/-, DB1+/-, DB2+/-, DB3+/-, DB4+/-, CKB+/-, DC0+/-, DC1+/-, DC2+/-, DC3+/-, DC4+/-, CKC+/-, DD0+/-, DD1+/-, DD2+/-, DD3+/-, DD4+/-, CKD+/-

\*2: LVDS signals should be measured at the terminal of 100  $\Omega$  resistance.

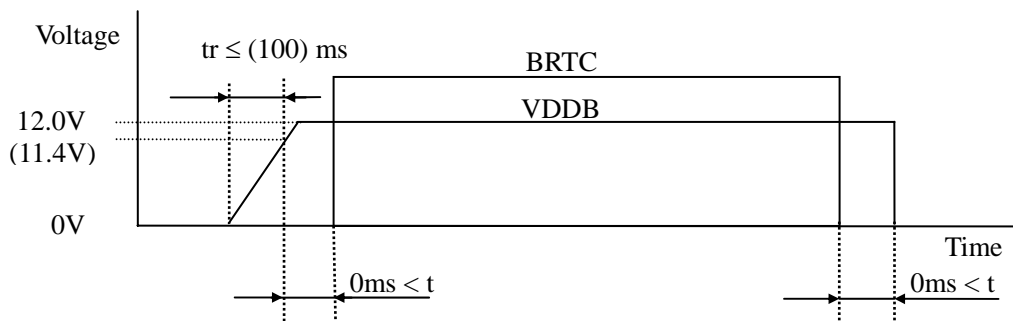

Note1: If there is a voltage variation (voltage drop) at the rising edge of VCC below 10.8V, there is a possibility that a product does not work due to a protection circuit.

Note2: LVDS signals must be set to Low or High-impedance, except the VALID period (See above sequence diagram), in order to avoid the circuitry damage.

If some of signals are cut while this product is working, even if the signal input to it once again, it might not work normally. If a customer stops the display and function signals, VCC also must be shut down.

Note3: The backlight should be turned on within the valid period of LVDS signals, in order to avoid unstable data display.

### 4.4.2 LED driver board

Note1: The backlight should be turned on within the valid period of LVDS signals, in order to avoid unstable data display.

Note2: If  $t_r$  is more than (100) ms, the backlight will be turned off by a protection circuit for LED driver board.

Note3: When VDDB is 0V or BRTC is Low, PWSEL must be set to Low or Open.

# PRELIMINARY

## 4.5 CONNECTIONS AND FUNCTIONS FOR INTERFACE PINS

Luminance) (At frequency: 325 Hz)	1.0	100% (Max. Luminance)	Low	BRTP signal
Duty ratio	Luminance ratio								
(0.01)	(1)% (Min. Luminance) (At frequency: 325 Hz)								
1.0	100% (Max. Luminance)								

Note1: In case of the variable resistor control method and the voltage control method, noises may appear on the display image depending on the input signals timing for LCD panel signal processing board.

**Use PWM method, if interference noises appear on the display image!**

Note2: The LED driver board will stop working, if the Low period of BRTP signal is more than 50ms while BRTC signal is High or Open. Then the backlight will not turn on anymore, even if BRTP signal is input again. This is not out of order. The LED driver board will start to work when power is supplied again.

Note3: These data are the target values.

Note4: See "**4.6.2 Detail of BRTP timing**".

### 4.6.2 Detail of B RTP timing

#### (1) Timing diagrams

- Outline chart

- Detail of **A** part

#### (2) Each parameter

Parameter	Symbol	min.	typ.	max.	Unit	Remarks
Luminance control frequency	FL	(185)	-	(1,000)	Hz	Note1, Note2
External PWM pulse width	tPWH	(30)	-	-	μs	Note1, Note3

Note1: Definition of parameters is as follows.

$$FL = \frac{1}{tPW}, \quad DL = \frac{tPWH}{tPW}$$

Note2: See the following formula for luminance control frequency.

$$\text{Luminance control frequency} = 1/tv \times (n+0.25) \text{ [or } (n+0.75)]$$

$$n = 1, 2, 3 \dots \dots$$

tv: Vertical cycle (See "4.9.1 Timing characteristics".)

**The interference noise of luminance control frequency and input signal frequency for LCD panel signal processing board may appear on a display. Set up luminance control frequency so that the interference noise does not appear!**

Note3: See "4.6.1 Luminance control methods".

Viewing angle	Right	$\theta U = 0^\circ, \theta D = 0^\circ, CR \geq 10$	$\theta R$	70	88	-	BM-5A or EZ Contrast	Note3 Note10
	Left	$\theta U = 0^\circ, \theta D = 0^\circ, CR \geq 10$	$\theta L$	70	88	-		
	Up	$\theta R = 0^\circ, \theta L = 0^\circ, CR \geq 10$	$\theta U$	70	88	-		
	Down	$\theta R = 0^\circ, \theta L = 0^\circ, CR \geq 10$	$\theta D$	70	88	-		

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

T<sub>a</sub> = 25°C, V<sub>DD</sub> = 12.0V, V<sub>DD(B)</sub> = 12.0V, PWM: Duty 100%, Display mode: QXGA,  
Horizontal cycle = 1/96.72 kHz, Vertical cycle = 1/60.0 Hz

Optical characteristics are measured at luminance saturation 20minutes after the product works in the dark room. Also measurement methods are as follows.

Note3: Product surface temperature at the maximum luminance control: TopF = 32°C

Note4: Product surface temperature at 450cd/m<sup>2</sup> luminance control: TopF = 30°C

Temperature difference in display area:  $\Delta T_{BD}$ °C

- Note5: See "4.13.2 Definition of contrast ratio".
- Note6: See "4.13.3 Definition of luminance uniformity".
- Note7: See "4.13.4 Definition of color uniformity".
- Note8: These coordinates are found on CIE 1931 chromaticity diagram.
- Note9: See "4.13.5 Definition of response times".
- Note10: See "4.13.6 Definition of viewing angles".

2

#### 4.13.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance of white screen}}{\text{Luminance of black screen}}$$

#### 4.13.3 Definition of luminance uniformity

The luminance uniformity is calculated by using following formula.

$$\text{Luminance uniformity (LU}_{xx}\text{)} = \frac{\text{Minimum luminance from } \textcircled{1} \text{ to } \textcircled{9}}{\text{Maximum luminance from } \textcircled{1} \text{ to } \textcircled{9}}$$

xx: 0, 104, 512, 816, 1023 gray scale.

The luminance is measured at near the 9 points shown below.

#### 4.13.4 Definition of color uniformity

The color ( $u'$ ,  $v'$ ) is measured at near the 9 points shown below.

The color uniformity in each measuring point is calculated by using the following formula.

$$\text{Color uniformity } (\Delta u'v') = \sqrt{(u'_x - u'_y)^2 + (v'_x - v'_y)^2}$$

$u'_x, v'_x$ :  $u'$ ,  $v'$  value at measuring point x.

$u'_y, v'_y$ :  $u'$ ,  $v'$  value at measuring point y.

### 4.13.5 Definition of response times

Response time is measured at the time when the luminance changes from "black" to "white", or "white" to "black" on the same screen point, by photo-detector. Ton is the time when the luminance changes from 10% up to 90%. Also Toff is the time when the luminance changes from 90% down to 10% (See the following diagram.).

### 4.13.6 Definition of viewing angles

## 5. ESTIMATED LUMINANCE LIFETIME

The luminance lifetime is the time from initial luminance to half-luminance.

**This lifetime is the estimated value, and is not guarantee value.**

Condition		Estimated luminance lifetime (Life time expectancy) Note1, Note2, Note3	Unit
LED elementary substance	25°C (Ambient temperature of the product) Continuous operation, PWM: Duty 100%	70,000	h
	60°C (Surface temperature at screen) Continuous operation, PWM: Duty 100%	TBD	

Note1: Life time expectancy is mean time to half-luminance.

Note2: Estimated luminance lifetime is not the value for an LCD module but the value for LED elementary substance.

Note3: By ambient temperature, the lifetime changes particularly. Especially, in case the product works under high temperature environment, the lifetime becomes short.

# PRELIMINARY

## 6. RELIABILITY TESTS

Test item	Condition	Judgment Note1
High temperature and humidity (Operation)	① $60 \pm 2^{\circ}\text{C}$ , RH= 60%, 500hours ② Display data is white. Note2	No display malfunctions
Heat cycle (Operation)	① $0 \pm 3^{\circ}\text{C}$ ...1hour $60 \pm 3^{\circ}\text{C}$ ...1hour ② 50cycles, 4hours/cycle ③ Display data is white. Note2	
Thermal shock (Non operation)	① $-20 \pm 3^{\circ}\text{C}$ ...30minutes $60 \pm 3^{\circ}\text{C}$ ...30minutes ② 100cycles, 1hour/cycle ③ Temperature transition time is within 5 minutes.	
Vibration (Non operation)	① 5 to 100Hz, $11.76\text{m/s}^2$ ② 1 minute/cycle ③ X, Y, Z directions ④ 10 times each directions	No display malfunctions No physical damages
Mechanical shock (Non operation)	① $294\text{m/s}^2$ , 11ms ② X, Y, Z directions ③ 3 times each directions	No display malfunctions
ESD (Operation)	① 150pF, 150Ω, $\pm 10\text{kV}$ ② 9 places on a panel surface Note3 ③ 10 times each places at 1 sec interval	
Dust (Operation)	① Sample dust: No.15 (by JIS-Z8901) ② 15 seconds stir ③ 8 times repeat at 1 hour interval Note2	
Low pressure	Non-operation	No display malfunctions
	Operation	
	① 15kPa (Equivalent to altitude 13,600m) ② $-20^{\circ}\text{C} \pm 3^{\circ}\text{C}$ ...24 hours ③ $+60^{\circ}\text{C} \pm 3^{\circ}\text{C}$ ...24 hours	
	① 53.3kPa (Equivalent to altitude 4,850m) ② $0^{\circ}\text{C} \pm 3^{\circ}\text{C}$ ...24 hours ③ $+60^{\circ}\text{C} \pm 3^{\circ}\text{C}$ ...24 hours Note2	

Note1: Display and appearance are checked under environmental conditions equivalent to the inspection conditions of defect criteria.

Note2: Luminance:  $450\text{cd/m}^2$  at luminance control.

Note3: See the following figure for discharge points

## 7. PRECAUTIONS

### 7.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. **Be sure to read "7.2 CAUTIONS" and "7.3 ATTENTIONS"!**

This sign has the meaning that a customer will be injured or the product will sustain damage if the customer practices wrong operations.

This sign has the meaning that a customer will be injured if the customer practices wrong operations.

### 7.2 CAUTIONS

**\* Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: Equal to or no greater than  $294\text{m/s}^2$  and equal to or no greater than 11ms, Pressure: Equal to or no greater than 19.6N ( $\phi 16\text{mm}$  jig))**

### 7.3 ATTENTIONS

#### 7.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② Do not hook nor pull cables such as lamp cable, and so on, in order to avoid any damage.
- ③ When the product is put on the table temporarily, display surface must be placed downward.
- ④ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- ⑤ The torque for product mounting screws must never exceed 0.735N·m. Higher torque might result in distortion of the bezel. And the length of product mounting screws must be  $\leq 5.0\text{mm}$ .

- ⑥ The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura.
- Recommended installing method: Ideal plane "A" is defined by one mounting hole (datum point) and other mounting holes. The ideal plane "A" should be the same plane within  $\pm 0.3$  mm.

- ⑦ Do not press or rub on the sensitive product surface. When cleaning the product surface, wipe it with a soft dry cloth.
- ⑧ Do not push or pull the interface connectors while the product is working.
- ⑨ When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.
- ⑩ Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal by any chance, please wash it away with soap and water.

### 7.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurred by temperature difference, the product packing box must be opened after enough time being left under the environment of an unpacking room. Evaluate the storage time sufficiently because dew condensation is affected by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with the original packing state after a customer receives the package)
- ③ Do not operate in high magnetic field. If not, circuit boards may be broken.
- ④ This product is not designed as radiation hardened.

## 7.3.3 Characteristics

**The following items are neither defects nor failures.**

- ① Response time, luminance and color may be changed by ambient temperature.
- ② Display mura, flickering, vertical streams or tiny spots may be observed depending on display patterns.
- ③ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen. 2
- ④ The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑤ Optical characteristics may be changed depending on input signal timings.

## 7.3.4 Others

- ① All GND, GNDB, VDD and VDDB terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ Pack the product with the original shipping package, in order to avoid any damages during transportation, when returning the product to NLT for repairing and so on.
- ④ The LCD module by itself or integrated into end product should be packed and transported with display in the vertical position. Otherwise the display characteristics may be degraded.

## 8. OUTLINE DRAWINGS

### 8.1 FRONT VIEW

Note1: Not shown tolerances of the dimensions are  $\pm 0.5$ mm.

Note2: The torque for product mounting screws must never exceed 0.735N·m.

Note3: The length of product mounting screws from surface of plate must be  $\leq 5.0$ mm.

Note4: The values in parentheses are for reference.

Unit: mm

8.2 REAR VIEW

- Note1: Not shown tolerances of the dimensions are  $\pm 0.5$ mm.
- Note2: The torque for product mounting screws must never exceed 0.735N·m.
- Note3: The length of product mounting screws from surface of plate must be  $\leq 5.0$ mm.
- Note4: The values in parentheses are for reference.

Unit: mm
