TFT COLOR LCD MODULE

NL6448BC33-70C

26cm (10.4 Type) VGA

DATA SHEET

DOD-PP-0948 (1st edition)

This DATA SHEET is updated document from PRELIMINARY DATA SHEET DOD-PP-0862(2).

All information is subject to change without notice. Please confirm the sales representative before starting to design your system.

INTRODUCTION

The Copyright to this document belongs to NEC LCD Technologies, Ltd. (hereinafter called "NEC"). No part of this document will be used, reproduced or copied without prior written consent of NEC.

NEC does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NEC.

Some electronic parts/components would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NEC, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three quality grades: "**Standard**", "**Special**", and "**Specific**" of the highest grade of a quality assurance program at the choice of a customer. Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard quality grade is required to contact an NEC sales representative in advance.

The **Standard** quality grade applies to the products developed, designed and manufactured in accordance with the NEC standard quality assurance program, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses are, directly or indirectly, free of any damage to death, human bodily injury or other property, like general electronic devices.

Examples: Computers, office automation equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment, industrial robots, etc.

The **Special** quality grade applies to the products developed, designed and manufactured in accordance with an NEC quality assurance program stricter than the standard one, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses might directly cause any damage to death, human bodily injury or other property, or such application under more severe condition than that defined in the Standard quality grade without such direct damage.

Examples: Control systems for transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, medical equipment not specifically designed for life support, safety equipment, etc.

The **Specific** quality grade applies to the products developed, designed and manufactured in accordance with the standards or quality assurance program designated by a customer who requires an extremely higher level of reliability and quality for such products.

Examples: Military systems, aircraft control equipment, aerospace equipment, nuclear reactor control systems, medical equipment/devices/systems for life support, etc.

The quality grade of this product is the "Standard" unless otherwise specified in this document.

1. OUTLINE

1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL6448BC33-70C is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color (Red, Green, Blue) data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

1.2 APPLICATION

• For industrial use

1.3 FEATURES

- Adoption of ST-NLT (Super-Transmissive Natural Light TFT)
- Long life LED backlight type
- High luminance
- High contrast
- Low reflection
- Wide viewing angle
- Wide temperature range
- 6-bit digital RGB signals
- DE (Data enable) function
- Reversible-scan direction
- Replaceable lamp holder for backlight
- Acquisition product for UL60950-1/CSA C22.2 No.60950-1-03 (File number: E170632)
- Compliant with the European RoHS directive (2002/95/EC)

2. GENERAL SPECIFICATIONS

Display area	211.2 (H) × 158.4 (V) mm			
Diagonal size of display	26cm (10.4 inches)			
Drive system	a-Si TFT active matrix			
Display color	262,144 colors			
Pixel	640 (H) × 480 (V) pixels			
Pixel arrangement	RGB (Red dot, Green dot, Blue dot) vertical stripe			
Dot pitch	0.11 (H) × 0.33 (V) mm			
Pixel pitch	$0.33 (H) \times 0.33 (V) mm$			
Module size	243.0 (W) × 185.1 (H) × 10.5 (D) mm (typ.)			
Weight	475g (typ.)			
Contrast ratio	900:1 (typ.)			
Viewing angle	 At the contrast ratio ≥ 10:1 Horizontal: Right side 80° (typ.), Left side 80° (typ.) Vertical: Up side 80° (typ.), Down side 80° (typ.) 			
Designed viewing direction	 <i>At DPS= Low or Open: Normal scan</i> Viewing direction without image reversal: Up side (12 o'clock) Viewing direction with contrast peak: Down side (6 o'clock) Viewing angle with optimum grayscale (γ≒ 2.2): Normal axis (perpendicula) 			
Polarizer surface	Clear + Antireflection (AR)			
Polarizer pencil-hardness	2H (min.) [by JIS K5400]			
Color gamut	At LCD panel center 40% (typ.) [against NTSC color space]			
Response time	$Ton+Toff (10\% \leftrightarrow 90\%)$ 18ms (typ.)			
Luminance	$At IL= 50mA/One \ circuit$ 900 cd/m ² (typ.)			
Signal system	6-bit digital signals for data of RGB colors, Dot clock (CLK), Data enable (DE), Horizontal synchronous signal (Hsync), Vertical synchronous signal (Vsync)			
Power supply voltage	LCD panel signal processing board: 3.3V or 5.0V			
Backlight	LED backlight type: (Replaceable part • Lamp holder set: Type No. 104LHS57 (Recommended LED driver board (Option) • LED driver board :Type No. 104PW01F			
Power consumption	At IL= 50mA/One circuit, Checkered flag pattern 6.4 W (typ.)

Onerating tem	Front surface		TopF	-30 to +80	# ℃	Note4
Operating tem	iperature	Rear surface	TopR	-30 to +80	# ℃	Note5
				≤95	%	Ta≤40°C
				≤85	%	40°C < Ta≤50°C
Relative humidity Note6			RH	≤55	%	50°C < Ta≤60°C
				≤36	%	60°C < Ta≤70°C
				≤24	%	70°C < Ta≤80°C
	Absolute hum Note6	nidity	AH	≤70 Note7	g/m ³	-

Note1: CLK, Hsync, Vsync, DE, DATA (R0 to R5, G0 to G5, B0 to B5)

Note2: DPS

Note3: If the product surface (polarizer) is exposed to an ultraviolet ray, the polarizer may discolor (Surface treatment may be damaged.). Use a filter to protect the polarizer from the ultraviolet ray.

Note4: Measured at LCD panel surface (including self-heat)

- Note5: Measured at LCD module's rear shield surface (including self-heat)
- Note6: No condensation
- Note7: Water amount at Ta= 80°C and RH= 24%

4.3 ELECTRICAL CHARACTERISTICS

4.3.1 LCD panel signal processing board

	8						(Ta= 25°C)
Parameter		Symbol	min.	typ.	max.	Unit	Remarks
Power supply voltage		VCC	3.0	3.3	3.6	V	at VCC= 3.3V
Tower suppry voltage		vee	4.75	5.0	5.25	V	at VCC= 5.0V
Power supply current		ICC	-	300 Note1	410 Note2	mA	at VCC= 3.3V
rower suppry current	Power supply current		-	200 Note1	270 Note2	mA	at VCC= 5.0V
Logic input voltage for	High	VDH	0.7VCC	-	VCC	V	
display signals	Low	VDL	0	-	0.3VCC	V	CMOS level
Input voltage for DPS signal	High	VFH	0.7VCC	_	VCC	V	CIVIOS IEVel
input voltage for DI 5 Signal	Low	VFL	0	-	0.3VCC	V	

Note1: Checkered flag pattern [by EIAJ ED-2522] Note2: Pattern for maximum current

4.3.2 Backlight lamp

					(Ta=	25°C, Note1, Note2)
Parameter	Symbol	min.	typ.	max.	Unit	Remarks
Forward current	IL	-	50.0	55.0	mA	-
Forward Voltage		23.8	27.0	30.6		Ta= +25°C at IL= 50mA /One circuit
	VL	21.3	-	-	v	Ta= +80°C at IL= 50mA /One circuit
	VL	-	-	33.6	v	Ta= -30°C at IL= 50mA /One circuit
		-	-	33.9		Ta= -30°C at IL= 55mA /One circuit

Note1: Please drive with constant current.

Note2: The Luminance uniformity may be changed depending on the current variation between 4 circuits. It is recommended that the current value difference among the circuits be less than 5%.

4.3.3 Power supply voltage ripple

This product works if the ripple voltage levels are over the permissible values as the following table, ☆ but there might be noise on the display image.

Power supp	ly voltage	Ripple voltage Note1 (Measure at input terminal of power supply)	Unit
VCC	3.3 V	≤100	mVp-p
vec	5.0 V	≤100	mVp-p

Note1: The permissible ripple voltage includes spike noise.

4.3.4 Fuse

Parameter	Fuse		Rating	Fusing current	Remarks	
Tarameter	Туре	Supplier	Rating	Pushig current	Kemarks	
VCC	FCC16202AB	KAMAYA ELECTRIC	2.0A	4.0A	Note1	
vee	FCC10202AB	Co., Ltd.	32V	4.0A	Note1	

Note1: The power supply's rated current must be more than the fusing current. If it is less than the ☆ fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

4.4 POWER SUPPLY VOLTAGE SEQUENCE

4.4.1 LCD panel signal processing board

- Note1: If there is a voltage variation (voltage drop) at the rising edge of VCC below 3.0V in "VCC = 3.3V" or 4.75V in "VCC = 5.0V", there is a possibility that a product does not work due to a protection circuit.
- Note2: Display signals (CLK, Hsync, Vsync, DE, DATA (R0 to R5, G0 to G5, B0 to B5)) and function signal (DPS) must be set to Low or High-impedance, except the VALID period (See above sequence diagram), in order to avoid the circuitry damage. If some of display and function signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. If a customer stops the display and function signals, VCC also must be shut down.

4.4.2 LED Driver board (Option)

- Note1: These are the display and function signals for LCD panel signal processing board.
- Note2: The backlight should be turned on within the valid period of display and function signals, in order to avoid unstable data display.

4.5 CONNECTIONS AND FUNCTIONS FOR INTERFACE PINS

4.5.1 LCD panel signal processing board

CN1 socket (LCD module side): DF9C-31P-1V (2*) (Hirose Electric Co., Ltd. (HRS)) Adaptable plug: DF9-31S-1V (2*), DF9-31S-1V (3*) (Hirose Electric Co., Ltd. (HRS))

Pin No.	Symbol	Signal	Remarks
1	GND	Ground	Note1
2	CLK	Dot clock	
3	Hsync	Horizontal synchronous signal	-
4	Vsync	Vertical synchronous signal	
5	GND	Ground	Note1
6	R0	Red data (LSB)	Least significant bit
7	R1	Red data	
8	R2	Red data	
9	R3	Red data	-
10	R4	Red data	
11	R5	Red data (MSB)	Most significant bit
12	GND	Ground	Note1
13	G0	Green data (LSB)	Least significant bit
14	G1	Green data	
15	G2	Green data	
16	G3	Green data	
17	G4	Green data	
18	G5	Green data (MSB)	Most significant bit
19	GND	Ground	Note1
20	B0	Blue data (LSB)	Least significant bit
21	B1	Blue data	
22	B2	Blue data	
23	B3	Blue data	7
24	B4	Blue data	
25	B5	Blue data (MSB)	Most significant bit
26	GND	Ground	Note1
27	DE	Selection of DE / Fixed mode	High or Open:Fixed modeData enable signal:DE mode
28	VCC	Power supply	Note1
29	VCC	Power supply	110101
30	N. C.	-	Keep this pin Open.
31	DPS	Selection of scan direction	High:Reverse scanLow or Open:Normal scanNote2

Note1: All VCC and GND terminals should be used without any non-connected lines. Note2: See "**4.8 SCANNING DIRECTIONS**".

4.5.2 Backlight lamp

CN2 plug Adaptable	(LCD module side socket:): SM08B-SRSS-TB (J.S.T. Mfg. Co SHR-08V-S, SHR-08V-S-B (J.S.T

	Down	$\theta R = 0^\circ, \ \theta L = 0^\circ, \ CR \ge 10$	θD	70	80	-	0			

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

Ta=25°C, VCC=3.3V, IL= 50mA/One circuit, Display mode: VGA, Horizontal cycle = 1/31.468kHz, Vertical cycle = 1/59.94Hz, DPS= Low or Open: Normal scan

Optical characteristics are measured at luminance saturation 20minutes after the product \Rightarrow works, in the dark room. Also measurement methods are as follows.

- Note3: See "4.10.2 Definition of contrast ratio".
- Note4: See "4.10.3 Definition of luminance uniformity".
- Note5: These coordinates are found on CIE 1931 chromaticity diagram.
- Note6: Product surface temperature: TopF= 32°C
- Note7: See "4.10.4 Definition of response times".
- Note8: See "4.10.5 Definition of viewing angles".

22

4.10.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

Contrast ratio (CR) = Luminance of white screen Luminance of black screen

4.10.3 Definition of luminance uniformity

The luminance uniformity is calculated by using following formula.

The luminance is measured at near the 5 points shown below.

4.10.4 Definition of response times

Response time is measured at the time when the luminance changes from "white" to "black", or "black" to "white" on the same screen point, by photo-detector. Ton is the time when the luminance changes from 90% down to 10%. Also Toff is the time when the luminance changes from 10% up to 90% (See the following diagram.).

5. ESTIMATED LUMINANCE LIFETIME

The luminance lifetime is the time from initial luminance to half-luminance.

This lifetime is the estimated value, and is not guarantee value.

	Condition	Estimated luminance lifetime (Life time expectancy) Note1, Note2, Note3	Unit
LED	25°C (Ambient temperature of the product) Continuous operation, IL= 50mA/One circuit	70,000	h
elementary substance	80°C (Surface temperature at screen) Continuous operation, IL= 50mA/One circuit	60,000	h

Note1: Life time expectancy is mean time to half-luminance.

Note2: Estimated luminance lifetime is not the value for an LCD module but the value for LED elementary substance.

Note3: By ambient temperature, the lifetime changes particularly. Especially, in case the product works under high temperature environment, the lifetime becomes short.

6. RELIABILITY TESTS

Test item	Condition	Judgment Note1				
High temperature and humidity (Operation)	 (1) 60 ± 2°C, RH= 90%, 240hours Note3, Note4 (2) Display data is black. 					
High temperature (Operation)	 (1) 80 ± 3°C, 240hours Note3, Note4 (2) Display data is black. 					
Low temperature (Non Operation)	① $-40 \pm 2^{\circ}C$, 240hours					
Heat cycle (Operation)	 (1) -30 ± 3°C1hour 80 ± 3°C1hour Note3, Note4 (2) 50cycles, 4 hours/cycle (3) Display data is black. 	No display malfunctions				
Thermal shock (Non operation)	 (1) -30 ± 3°C30minutes 80 ± 3°C30minutes (2) 100cycles, 1hour/cycle (3) Temperature transition time is within 5 minutes. 					
ESD (Operation)	 ① 150pF, 150Ω, ±10kV ② 9 places on a panel surface Note2 ③ 10 times each places at 1 sec interval 					
Dust (Operation)	① Sample dust: No. 15 (by JIS-Z8901) ② 15 seconds stir					
Vibration (Non operation)	③ 5 to 100Hz, 19.6m/s²② 1 minute/cycle					
Mechanical shock (Non operation)	 (1) 539m/s², 11ms (2) ±X, ±Y, ±Z directions (3) 5 times each directions 	No physical damages				

Note1: Display and appearance are checked under environmental conditions equivalent to the inspection conditions of defect criteria.

Note2: See the following figure for discharge points.

7. PRECAUTIONS

7.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. Be sure to read "7.2 CAUTIONS" and "7.3 ATTENTIONS"!

This sign has the meaning that a customer will be injured or the product will sustain damage if the customer practices wrong operations.

This sign has the meaning that a customer will be injured if the customer practices wrong operations.

☆

☆

7.2 CAUTIONS

* Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: Equal to or no greater than 539m/s² and equal to or no greater than 11ms, Pressure: Equal to or no greater than 19.6 N (\$\operp16mm fig)\$)

☆

7.3 ATTENTIONS

7.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② When the product is put on the table temporarily, display surface must be placed downward.
- ③ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- ④ The torque for product mounting screws must never exceed 0.294N·m. Higher torque might result in distortion of the bezel.
- ⑤ The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura.
- ⑤ Do not press or rub on the sensitive product surface. When cleaning the product surface, wipe it with a soft dry cloth.
- ⑦ Do not push or pull the interface connectors while the product is working.
- ③ When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.
- ⑨ Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal by any chance, please wash it away with soap and water.

☆

☆

發發

7.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurred by temperature difference, the product packing box must be opened after enough time being left under the environment of an unpacking room. Evaluate the storage time sufficiently because dew condensation is affected by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with the original packing state after a customer receives the package)
- ③ Do not operate in high magnetic field. If not, circuit boards may be broken.
- ④ This product is not designed as radiation hardened.

7.3.3 Characteristics

The following items are neither defects nor failures.

- ① Characteristics of the LCD (such as response time, luminance, color uniformity and so on) may be changed depending on ambient temperature. If the product is stored under condition of low temperature for a long time, it may cause display mura. In this case, the product should be operated after enough time being left under condition of operating temperature.
- ② Display mura, flickering, vertical streams or tiny spots may be observed depending on display patterns.
- ③ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- ④ The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑤ Optical characteristics may be changed depending on input signal timings.
- (6) The product gives AR (antireflection) coating of the polarizer surface. Though AR (antireflection) coating actualizes the low reflection with the multilayer structure, the color of reflection may differ between products and the color change of reflection may occur in the same product by fluctuation of AR (antireflection) coating.

7.3.4 Others

- ① All GND and VCC terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ See "REPLACEMENT MANUAL FOR LAMP HOLDER SET", when replacing lamp holder set.
- ④ Pack the product with the original shipping package, in order to avoid any damages during transportation, when returning the product to NEC for repairing and so on.
- (5) The information of China RoHS directive six hazardous substances or elements in this product is 3×10^{-10} as follows.

China RoHS directive six hazardous substances or elements									
Lead (Pb)			Hexavalent Chromium (Cr VI)	Polybrominated Biphenys (PBB)	Polybrominated Biphenyl Ethers (PBDE)				
×	0	0	0	0	0				

Note1: (): This indicates that the poisonous or harmful material in all the homogeneous materials for this part is equal or below the limitation level of SJ/T11363-2006 standard regulation.

 \times : This indicates that the poisonous or harmful material in all the homogeneous materials for this part is above the limitation level of SJ/T11363-2006 standard regulation.
