1. Product Overview

1.1 Introduction of InnoLite II 2.5" SATA SSD

InnoLite II 2.5" SATA SSD products provide high capacity flash memory Solid State Drive (SSD) that electrically complies with Serial ATA (SATA) standard. It supports SATA II standard (3.0GHz) with high performance. The sustain read is at 240 MB per second (max.), and sustain write is at 220 MB per second (max); Except sequential read/ write performance, InnoLite II 2.5" SATA SSD also enhances random data access for small files. It designed with standard 2.5-inch form factor, which can be used in laptop. InnoLite II 2.5" SATA SSD is designed for industrial field. The SSD have good performance, no latency time and small seek time. It effectively reduces the booting time of operation system and the power consumption is less than hard disk drive (HDD). InnoLite II 2.5" SATA SSD can work in harsh environment. The SSD is vibration resistance, and can work in lower or higher temperature than HDD. InnoLite II 2.5" SATA SSD complies with ATA protocol, no additional drives are required, and the SSD can be configured as a boot device or data storage device.

1.2 Product View

Figure 1: InnoLite II 2.5" SATA SSD

1.3 Product Models

InnoLite II 2.5" SATA SSD is available in follow capacities.

- 4 Channels

InnoLite II 2.5" SATA SSD 8GB

InnoLite II 2.5" SATA SSD 16GB

InnoLite II 2.5" SATA SSD 32GB

- 8 Channels

InnoLite II 2.5" SATA SSD 64GB

InnoLite II 2.5" SATA SSD 128GB

InnoLite II 2.5" SATA SSD 256GB

InnoLite II 2.5" SATA SSD 512GB

1.4 SATA Interface

InnoLite II 2.5" SATA SSD support SATA II interface, and compliant with SATA I. SATA II interface can work with Serial Attached SCSI (SAS) host system, which is used in server computer. InnoLite II 2.5" SATA SSD is compliant with Serial ATA Gen 1 and Gen 2 specification (Gen2 supports 1.5Gbps /3.0Gbps data rate). SATA connector uses a 7-pin signal segment and a 15-pin power segment.

1.5 2.5-inch form factor

Industry 2.5-inch standard form factor design with metal material case is easy for installation because 2.5-inch is a popular form factor in industrial field. 2.5-inch is most laptop's hard disk's form factor. InnoLite II 2.5" SATA SSD can easy install in laptop. InnoLite II 2.5" SATA SSD has a compact design 99.88mm (L) x 69.63mm (W) x 9.3mm (H).

1.6 Capacity

InnoLite II 2.5" SATA SSD provides unformatted 8GB, 16GB, 32GB, 64GB, 128GB, 256GB and 512GB capacities within MLC flash ICs.

2. Theory of operation

2.1 Overview

Figure 2 and Figure 3 show the different operation of InnoLite II 2.5" SATA SSD from the system level which separate by 32GB, including the major hardware blocks.

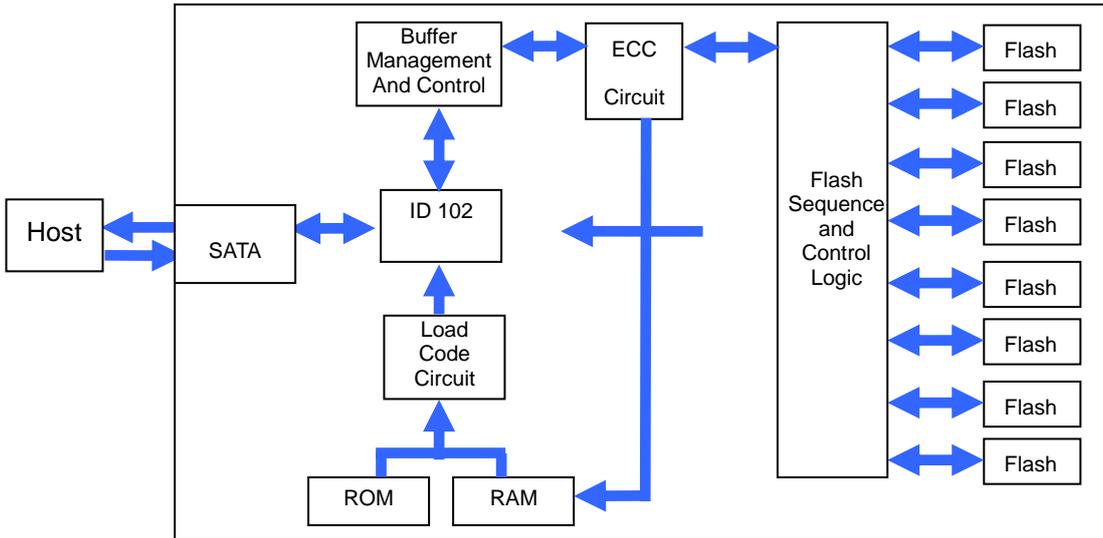

Figure 2: InnoLite II 2.5" SATA SSD Block Diagram From 32GB to 256GB

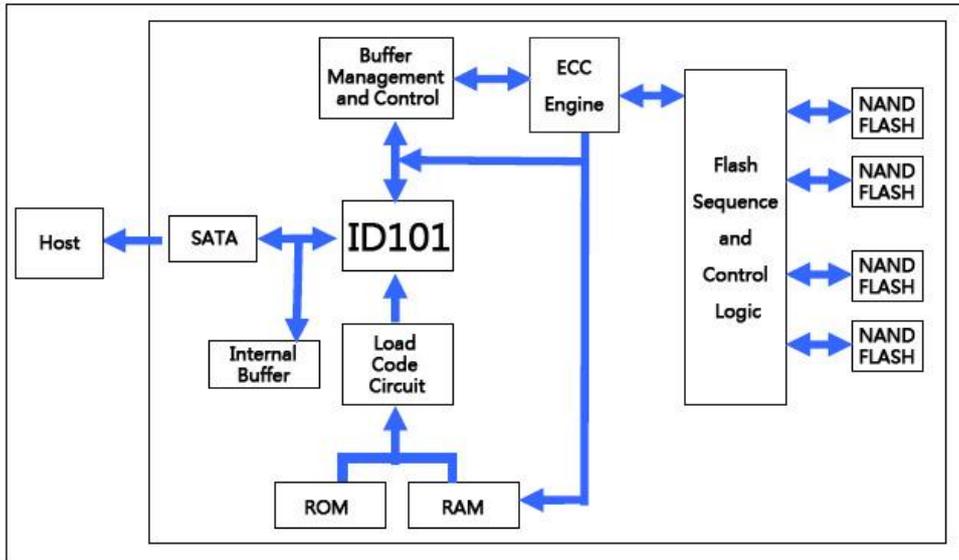

Figure 3: InnoLite II 2.5" SATA SSD Block Diagram From 8GB to 32GB

InnoLite II 2.5" SATA SSD integrates a SATA II controller and NAND flash memories. Communication with the host occurs through the host interface, using the standard ATA protocol. Communication with the flash device(s) occurs through the flash interface.

2.2 SATA II Controller

InnoLite II 2.5" SATA SSD is designed with ID 102 and ID101, a SATA II 3.0 Gbps (Gen. 2) controller, which supports hot-plug. The Serial ATA physical, link and transport layers are compliant with Serial ATA Gen 1 and Gen 2 specification (Gen 2 supports 1.5Gbps/3.0Gbps data rate). The controller has 8 channels/4 channels for flash interface.

2.3 Error Detection and Correction

Highly sophisticated Error Correction Code algorithms are implemented. The ECC unit consists of the Parity Unit (parity-byte generation) and the Syndrome Unit (syndrome-byte computation). This unit implements an algorithm that can correct 16 bits per 1024 bytes in an ECC block. Code-byte generation during write operations, as well as error detection during read operation, is implemented on the fly without any speed penalties.

2.4 Wear-Leveling

Flash memory can be erased within a limited number of times. This number is called the **erase cycle limit** or **write endurance limit** and is defined by the flash array vendor. The erase cycle limit applies to each individual erase block in the flash device.

InnoLite II 2.5" SATA SSD uses a static wear-leveling algorithm to ensure that consecutive writes of a specific sector are not written physically to the same page/block in the flash. This spreads flash media usage evenly across all pages, thereby extending flash lifetime.

2.5 Bad Blocks Management

Bad Blocks are blocks that contain one or more invalid bits whose reliability are not guaranteed. The Bad Blocks may be presented while the SSD is shipped, or may develop during the life time of the SSD. When the Bad Blocks is detected, it will be flagged, and not be used anymore. The SSD implement Bad Blocks management, Bad Blocks replacement, Error Correct Code to avoid data error occurred. The functions will be enabled automatically to transfer data from Bad Blocks to spare blocks, and correct error bit.

3. Installation Requirements

3.1 InnoLite II 2.5" SATA SSD Pin Directions

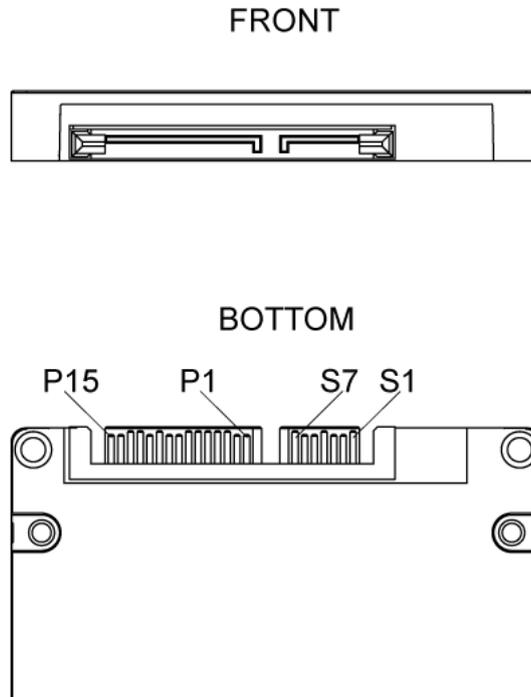

Figure 4: Signal Segment and Power Segment

3.2 Electrical Connections for InnoLite II 2.5" SATA SSD

A Serial ATA device may be either directly connected to a host or connected to a host through a cable. For connection via cable, the cable should be no longer than 1 meter. The SATA interface has a separate connector for the power supply. Please refer to the pin description for further details.

3.3 Form Factor

Please prepare following things:

- Screw driver.
- Four M3 screws.
- SATA single cable (7-pin, Maximum length 1 meter).
- SATA power cable (15-pin).

Please turn off your computer, and open your computer's case. Find one of available 2.5-inch slot, and plug the SSD in. To use the screws fix the SSD. Plug in the SATA single cable, and power cable.

Please boot the installation Operation System from CD-ROM, and install Operation System into SSD.

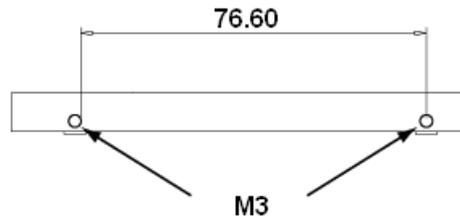

Figure 5: InnoLite II 2.5" SATA SSD Mechanical Screw Hole

3.4 Device drive

No additional device drives are required. The InnoLite II 2.5" SATA SSD can be configured as a boot device.

4. Specifications

4.1 CE and FCC Compatibility

InnoLite II 2.5" SATA SSD conforms to CE and FCC requirements.

4.2 RoHS Compliance

InnoLite II 2.5" SATA SSD is fully compliant with RoHS directive.

4.3 Environmental Specifications

4.3.1 Temperature Ranges

Operating Temperature Range:

- Standard Grade: 0°C to +70°C
- Industrial Grade: -40°C to +85°C

Storage Temperature Range: -55°C to +95°C

4.3.2 Humidity

Relative Humidity: 10-95%, non-condensing

4.3.3 Shock and Vibration

Table 1: Shock/Vibration Testing for InnoLite II 2.5" SATA SSD

Reliability	Test Conditions	Reference Standards
Vibration	7 Hz to 2K Hz, 20G, 3 axes	IEC 68-2-6
Mechanical Shock	Duration: 0.5ms, 1500 G, 3 axes	IEC 68-2-27

4.3.4 Mean Time between Failures (MTBF)

Table 2 summarizes the MTBF prediction results for various InnoLite II 2.5" SATA SSD configurations. The analysis was performed using a RAM Commander™ failure rate prediction.

- **Failure Rate:** The total number of failures within an item population, divided by the total number of life units expended by that population, during a particular measurement interval under stated condition.
- **Mean Time between Failures (MTBF):** A basic measure of reliability for repairable items: The mean number of life units during which all parts of the item perform within their specified limits, during a particular measurement interval under stated conditions.
-

Table 2: InnoLite II 2.5" SATA SSD MTBF

Product	Condition	MTBF (Hours)
InnoLite II 2.5" SATA SSD	Telcordia SR-332 GB, 25°C	>4,000,000

4.4 Endurance

Read Cycles: Unlimited Read Cycles.

Data Retention: 10 years.

Wear-Leveling Algorithm: Support.

Bad Blocks Management: Support

Error Correct Code: Support

4.5 Transfer Mode

InnoLite II 2.5" SATA SSD support following transfer mode:

PIO Mode 0~4

Ultra DMA 0~6

Serial ATA I 1.5Gbps

Serial ATA II 3.0Gbps

4.6 Pin Assignment

InnoLite II 2.5" SATA SSD uses a standard SATA pin-out. See Table 3 for InnoLite II 2.5" SATA SSD pin assignments.

Table 3: InnoLite II 2.5" SATA SSD Pin Assignment

Name	Type	Description
S1	GND	NA
S2	A+	Differential Signal Pair A

4.7 Mechanical Dimensions

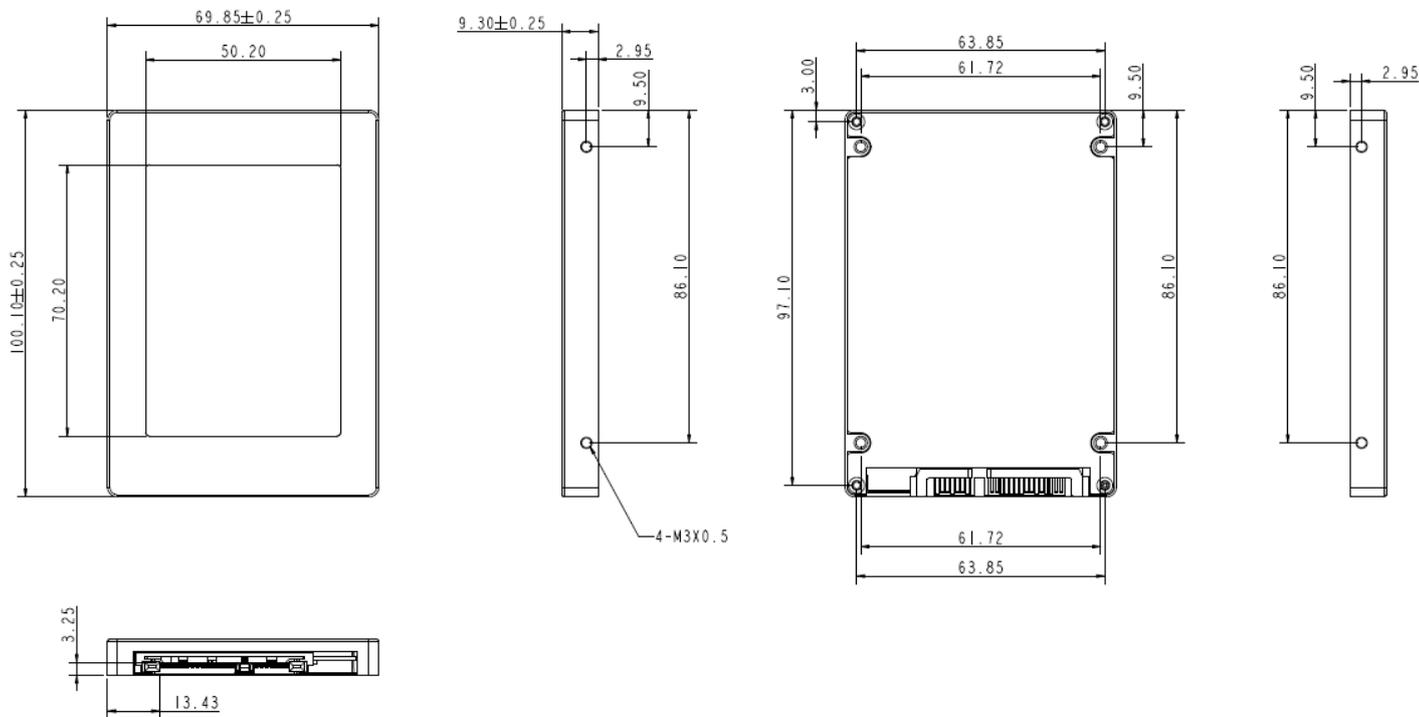

Figure 6: InnoLite II 2.5" SATA SSD mechanical dimensions

4.8 Assembly weight

An InnoLite II 2.5" SATA SSD within MLC flash ICs, 16GB's weight is 90 grams approx. If the capacity is different, the flash chip's weight needs to be added. However, the total weight of SSD will be less than 95 grams.

4.9 Performance

Burst Transfer Rate: 3.0 Gbps

◆ 256GB and 512GB

Sustained Read : 240MB/sec (max.)

Sustained Write : 220MB/sec (max.)

◆ 128GB

Sustained Read : 210MB/sec (max.)

Sustained Write : 145MB/sec (max.)

◆ 64GB

Sustained Read : 210MB/sec (max.)

Sustained Write : 100MB/sec (max.)

◆ 32GB

Sustained Read : 120MB/sec (max.)

Sustained Write : 50MB/sec (max.)

◆ 16GB

Sustained Read : 120MB/sec (max.)

Sustained Write : 25MB/sec (max.)

◆ 8GB

Sustained Read : 60MB/sec (max.)

Sustained Write : 12MB/sec (max.)

4.10 Seek Time

InnoLite II 2.5" SATA SSD is not a magnetic rotating design. There is no seek or rotational latency required.

4.11 Hot Plug

The SSD support hot plug function and can be removed or plugged-in during operation. User has to avoid hot plugging the SSD which is configured as boot device and installed operation system.

Surprise hot plug : The insertion of a SATA device into a backplane (combine signal and power) that has power present. The device powers up and initiates an OOB sequence.

Surprise hot removal: The removal of a SATA device from a powered backplane, without first being placed in a quiescent state.

4.12 NAND Flash Memory

InnoLite II 2.5" SATA SSD uses Multi Level Cell (MLC) NAND flash memory, which is non-volatility, and high reliability which has 3,000 program/erase times and high speed memory storage. There are four statuses, including 00, 01, 10, and 11, of one cell. Read or Write data to flash memory for SSD is control by microprocessor.

4.13 Electrical Specifications

4.13.1 Power Requirement

Table 4: InnoLite II 2.5" SATA SSD Power Requirement

Item	Symbol	Rating	Unit
Input voltage	V _{IN}	+5DC +- 5%	V

4.13.2 Power Consumption

Table 5: Power Consumption

Mode	Power Consumption (mA)
Read	450
Write	560
Idle	200

4.14 Device Parameters

InnoLite II 2.5" SATA SSD device parameters are shown in Table 6.

Table 6: Device parameters

Capacity	LBA	Cylinders	Heads	Sectors	User capacity(MB)

DRDY shall be set to one.

DF (Device Fault) shall be cleared to zero.

DRQ shall be cleared to zero.

ERR shall be cleared to zero.

5.1.2.6 Prerequisites

DRDY set to one.

5.1.2.7 Description

The IDENTIFY DEVICE command enables the host to receive parameter information from the device. When the command is issued, the device sets the BSY bit to one, prepares to transfer the 256 words of device identification data to the host, sets the DRQ bit to one, clears the BSY bit to zero, and asserts INTRQ if nIEN is cleared to zero. The host may then transfer the data by reading

the Data register. Table 8 defines the arrangement and meaning of the parameter words in the buffer. All reserved bits or words shall be zero.

Some parameters are defined as a 16-bit value. A word that is defined as a 16-bit value places the most significant bit of the value on signal line DD15 and the least significant bit on signal line DD0. Some parameters are defined as 32-bit values (e.g. words (61:60)). Such fields are transfer using two successive word transfers. The device will first transfer the least significant bits, bits (15:0) of the value, on signal lines DD(15:0) respectively. After the least significant bits have been transferred, the most significant bits, bits(31:16) of the value, shall be transferred on DD(15:0) respectively.

Some parameters are defined as a string of ASCII characters.

5.1.3 IDLE

5.1.3.1 Command Code

E3h

5.1.3.2 Feature Set

Power Management Feature Set.

5.1.3.3 Protocol

Non-Data

5.1.3.4 Inputs

Values other than zero in the Sector Count register when the IDLE command is issued shall determine the time period programmed into the Standby timer.

Table 12: Idle command for inputs information

Register	7	6	5	4	3	2	1	0
Features	Na							
Sector Count	Timer period value							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	Obs	Na	Obs	DEV	Na	Na	Na	Na
Command	E3h							

Device register-

DEV shall specify the selected device.

Table 13: Idle command sector count register contents information

Sector Count register contents	Corresponding timeout period
0 (00h)	Timeout disabled
1-240 (01h-F0h)	(value*5)s
241-251 (F1h-FBh)	((Value-240)*30)min
252 (FCh)	21min
253 (FDh)	Period between 8 and 12 hrs
254 (Feh)	Reserved
255 (FFh)	21 min 15 s
NOTE – Times are approximate	

5.1.3.5 Normal Outputs

Table 14: Idle command for normal outputs information

Device	obs	Na	obs	DEV	Na	Na	Na	Na
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Device Register-

DEV shall indicate the selected device.

Status register-

BSY will be cleared to zero indicating command completion.

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ shall be cleared to zero.

ERR shall be cleared to zero.

5.1.4.6 Prerequisites

DRDY set to one

5.1.4.7 Description

The IDLE IMMEDIATE command allows the host to immediately place the device in the idle mode.

5.1.5 SMART

Individual SMART commands are identified by the value placed in the Feature register.

Table 18: SMART Feature register values

Value	Command
D0h	SMATR Read Data
D8h	SMART ENABLE OPERATIONS
D9h	SMART DISABLE OPERATIONS

5.1.5.1 SMART Read Data

5.1.5.1.1 Command Code

B0h with a Feature register value of D0h

5.1.5.1.2 Feature Set

Smart Feature Set

- Operation when the SMART feature set is implemented.

5.1.5.1.3 Protocol

PIO data-in

5.1.5.1.4 Inputs

Table 19: SMART command for inputs information

Register	7	6	5	4	3	2	1	0
Features	D0h							
Sector Count	Na							
LBA Low	Na							
LBA Mid	4Fh							
LBA High	C2h							
Device	Obs	Na	obs	DEV	Na	Na	Na	Na
Command	B0h							

Device register-

DEV shall specify the selected device.

5.1.5.1.5 Normal Outputs

Table 20: SMART command for normal outputs information

Register	7	6	5	4	3	2	1	0
Error	Na							
Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	Obs	Na	obs	DEV	Na	Na	Na	Na

Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR
--------	-----	------	----	----	-----	----	----	-----

Device Register-

DEV shall indicate the selected device.

Status register-

BSY will be cleared to zero indicating command completion.

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ shall be cleared to zero.

ERR shall be cleared to zero.

5.1.5.1.6 Prerequisites

DRDY set to one. SMART enabled.

5.1.5.1.7 Description

This command returns the Device SMART data structure to the host.

Table 21: ID of SMART data structure

ID(Hex)	Description
AA	Total Bad Block Count, Later Bad Block Count
AD	Average Erase Count, Max Erase Count

ID: Aah

Table 22: Smart command for bad block count information

Byte	Function	Description
0	0x00	NA
1	0x00	NA
2	Total Bad Block Count byte 1	Total Bad blocks of SSD
3	Total Bad Block Count byte 0	
4	Later Bad Block Count byte 1	Later Bad blocks of SSD
5	Later Bad Block Count byte 0	
6	Reserved	NA
7	Reserved	NA

ID: Eah

Table 23: Smart command for average/max erase count information

Byte	Function	Description
0	Average Erase Count (High Byte)	Average erase count of all blocks.
1	Average Erase Count	
2	Average Erase Count (Low Byte)	
3	Max Erase Count (High Byte)	Indicate a block which's erase count is the largest.
4	Max Erase Count	
5	Max Erase Count (Low Byte)	
6	Reserved	NA
7	Reserved	NA

- When the Maximum erase count is 255 bigger than average erase count, the wear-leveling will be executed.

ID: Ebh

Table 24: Smart command for average/ max erase count information

Byte	Function	Description
0	Average Erase Count byte 1	Average erase count of all blocks.
1	Average Erase Count byte 0	
2	Max Erase Count byte 1	Indicate a block which's erase count is the largest.
3	Max Erase Count byte 0	
5	Average Erase Count byte 2	
	Max Erase Count byte 2	
6	Reserved	NA
7	Reserved	NA

When the Maximum erase count is 255 bigger than average erase count, the wear-leveling will be executed.

5.1.5.2 SMART ENABLE OPERATIONS

5.1.5.2.1 Command Code

B0h with a Feature register value of D8h

5.1.5.2.2 Feature Set

Smart Feature Set

5.1.5.2.3 Protocol

Non-data

5.1.5.2.4 Inputs

Table 25: SMART Enable command for inputs information

Register	7	6	5	4	3	2	1	0
Features	D8h							
Sector Count	Na							
LBA Low	Na							
LBA Mid	4Fh							
LBA High	C2h							
Device	Obs	Na	obs	DEV	Na	Na	Na	Na
Command	B0h							

Device register-

DEV shall specify the selected device.

5.1.5.2.5 Normal Outputs

Table 26: SMART command for normal outputs information

Register	7	6	5	4	3	2	1	0
Error	Na							
Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							

Device	Obs	Na	obs	DEV	Na	Na	Na	Na
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Device Register-

DEV shall indicate the selected device.

Status register-

BSY will be cleared to zero indicating command completion.

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ shall be cleared to zero.

ERR shall be cleared to zero.

5.1.5.2.6 Prerequisites

DRDY set to one.

5.1.5.2.7 Description

This command enables access to all SMART capabilities within device.

5.1.5.3 SMART DISABLE OPERATIONS

5.1.5.3.1 Command Code

B0h with a Feature register value of D9h

5.1.5.3.2 Feature Set

Smart Feature Set

5.1.5.3.3 Protocol

Non-data

5.1.5.3.4 Inputs

Table 27: SMART DISABLE Command for inputs information

Register	7	6	5	4	3	2	1	0
Features	D9h							
Sector Count	Na							
LBA Low	Na							
LBA Mid	4Fh							
LBA High	C2h							
Device	Obs	Na	obs	DEV	Na	Na	Na	Na
Command	B0h							

Device register-

DEV shall specify the selected device.

5.1.5.3.5 Normal Outputs

Table 28: SMART command for normal outputs information

Register	7	6	5	4	3	2	1	0
Error	Na							

Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	Obs	Na	obs	DEV	Na	Na	Na	Na
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Device Register-

DEV shall indicate the selected device.

Status register-

BSY will be cleared to zero indicating command completion.

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ shall be cleared to zero.

ERR shall be cleared to zero.

5.1.5.3.6 Prerequisites

DRDY set to one. SMART enabled.

5.1.5.3.7 Description

This command disables all SMART capabilities within device.

5.1.6 Read Multiple

5.1.6.1 Command Code

C4h

5.1.6.2 Protocol

PIO data-in

5.1.6.3 Inputs

Table 29: Read multiple command for inputs information

Register	7	6	5	4	3	2	1	0
Features	Na							
Sector Count	Sector Count							
LBA Low	LBA(7:0)							
LBA Mid	LBA(15:8)							
LBA High	LBA(23:16)							
Device	obs	Na	obs	DEV	LBA(27:24)			
Command	C4h							

Sector Count-

Number of sectors to be transferred. A value of 00h specifies that 256 sectors are to be transferred.

LBA Low-

Starting LBA bits (7:0).

LBA Mid-

Starting LBA bits (15:8)

LBA High-

Starting LBA bits (23:16)

Device –

DEV shall specify the selected device.

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ will be cleared to zero

ERR will be set to one if an Error register bit is set to one.

5.1.7.6 Prerequisites

DRDY set to one.

5.1.7.7 Description

This command reads from 1 to 256 sectors as specified in the Sector Count register. A sector count of 0 requests 256 sectors. This transfer shall begin at the sector specified in the LBA Low, LBA Mid, LBA High, and Device registers. The DRQ bit is always set to one prior to data transfer regardless of the presence or absence of an error condition. The device shall interrupt for each DRQ block transferred.

ABRT shall be set to one if an error, include an ICRC error, has occurred during an Ultra DMA data transfer. ABRT shall be set to one if an address outside of the range of user-accessible address is requested if IDNF is not set to one.

LBA Low, LBA Mid, and LBA High, Device -

Shall be written with the address of first unrecoverable error.

Status register

BSY will be cleared to zero indicating command completion

DRDY will be set to one.

DF (Device Fault) will be set to one if a device fault has occurred.

DRQ will be cleared to zero

ERR will be set to one if an Error register bit is set to one.

5.1.16.6 Prerequisites

DRDY set to one. If bit 8 of IDENTIFY DEVICE word 59 is cleared to zero, a successful SET MULTIPLE MODE command shall proceed a WRITE MULTIPLE command.

5.1.16.7 Description

This command writes the number of sectors specified in the Sector Count register.

The number of sectors per block is defined by the content of word 59 of the IDENTIFY DEVICE response.

When the WRITE MULTIPLE command is issued, the SECTOR Count register contains the number of sectors (not the number of blocks) requested. The device shall interrupt for each DRQ block transferred.

IF the number of requested sectors is not evenly divisible by the block count, as many full blocks as possible are transferred, followed by a final, partial block transfer. The partial block transfer is for n sectors, where:

$N = \text{Remainder (sector count / block count)}$.

If the WRITE MULTIPLE command is received when WRITE MULTIPLE commands are disabled, the Write Multiple operation shall be rejected with command aborted.

Device errors encountered during WRITE MULTIPLE commands are posted after the attempted device write of the block or partial block transferred. The command ends with the sector in error, even if the error was in the middle of a block. Subsequent blocks are not transferred in the event of an error.

The contents of the Command Block Registers following the transfer of a data block that had a sector in error are undefined. The host should retry the transfer as individual requests to obtain valid error information. Interrupt pending is set when the DRQ bit is set to one at the beginning of each block or partial block.

5.1.17 Write Sector

5.1.17.1 Command Code

30h

5.1.17.2 Protocol

PIO data-out

5.1.17.3 Inputs

The LBA mid, LBA High, Device, and LBA Low specify the starting sector address to be written. The Sector Count register specifies the number of sectors to be transferred.

Table 59: Write sector command for inputs information

Register	7	6	5	4	3	2	1	0
Features	Na							
Sector Count	Sector Count							
LBA Low	LBA(7:0)							
LBA Mid	LBA(15:8)							
LBA High	LBA(23:16)							
Device	obs	LBA	obs	DEV	LBA(27:24)			
Command	30h							

Sector Count-

Number of sectors to be transferred. A value of 00h specifies that 256 sectors shall be transferred.

LBA Low-

Starting LBA bits (7:0)

LBA Mid-

Starting LBA bits (15:8)

LBA High-

Starting LBA bits (23:16)

Device –

The LBA bit shall be set to one to specify the address is an LBA.

DEV shall specify the selected device.

Bits(3:0) starting LBA bits (27:24)

5.1.17.4 Normal Output

Table 60: Write sector command for inputs information

Register	7	6	5	4	3	2	1	0
Error	Na							
Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	obs	Na	obs	DEV	Na	Na	Na	Na
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Device register-

DEV shall specify the selected device.

Status register

BSY will be cleared to zero indicating command completion

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ will be cleared to zero

ERR will be cleared to zero.

5.1.17.5 Error Outputs

An unrecoverable error encountered during the execution if this command results in the termination of the command. The Command Block registers contain the address of the sector where the first unrecoverable error occurred. The amount of data transferred is indeterminate.

Table 61: Write sector command for error outputs information

Register	7	6	5	4	3	2	1	0
Error	Na	WP	MC	IDNF	MCR	ABRT	NM	Na
Sector Count	Na							
LBA Low	LBA(7:0)							
LBA Mid	LBA(15:8)							
LBA High	LBA(23:16)							
Device	Obs	Na	obs	DEV	LBA(27:24)			
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Error register-

IDNF shall be set to one if a user-accessible address could not be found. IDNF shall be set to one if an address outside of the range of user-accessible addresses is requested if command aborted is not returned.

ABRT shall be set to one if an error, including an ICRC error, has occurred during an Ultra DMA data transfer. ABRT shall be set to one if the device is not able to complete the action requested by the command. ABRT shall be set to one if an address outside of the range of user-accessible addresses is requested if IDNF is not set to one.

LBA Low, LBA Mid, and LBA High, Device

Shall be written with the address of first unrecoverable error.

Status register

BSY will be cleared to zero indicating command completion

DRDY will be set to one.

DF (Device Fault) will be set to one if a device fault has occurred.

DRQ will be cleared to zero

ERR will be set to one if an Error register bit is set to one.

5.1.17.6 Prerequisites

DRDY set to one.

5.1.17.7 Description

This command writes from 1 to 256 sectors as specified in the Sector Count register. A sector count of 0 requests 256 sectors. The device shall interrupt for each DRQ block transferred.

5.1.18 Write DMA

5.1.18.1 Command Code

Cah

5.1.18.2 Protocol

DMA

5.1.18.3 Inputs

The LBA Mid, LBA High, Device, and LBA Low specify the starting sector address to be written. The Sector Count register specifies the number of sectors to be transferred.

Table 62: Write DMA command for input information

Register	7	6	5	4	3	2	1	0
Features	Na							
Sector Count	Sector Count							
LBA Low	LBA(7:0)							
LBA Mid	LBA(15:8)							
LBA High	LBA(23:16)							
Device	obs	LBA	obs	DEV	LBA(27:24)			
Command	Cah							

Sector Count-

Number of sectors to be transferred. A value of 00h specifies that 256 sectors shall be transferred.

LBA Low-

Starting LBA bits (7:0)

LBA Mid-

Starting LBA bits (15:8)

LBA High-

Starting LBA bits (23:16)

Device –

The LBA bit shall be set to one to specify the address is an LBA.

DEV shall specify the selected device.

Bits (3:0) starting LBA bits (27:24)

Normal Output

Table 63: Write DMA command for normal output information

Register	7	6	5	4	3	2	1	0
Error	Na							
Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	obs	Na	obs	DEV	Na	Na	Na	Na
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Device register-

DEV shall specify the selected device.

Status register

BSY will be cleared to zero indicating command completion

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ will be cleared to zero

ERR will be cleared to zero.

5.1.18.4 Error Outputs

Table 64: Write DMA command for error outputs information

Register	7	6	5	4	3	2	1	0
Error	ICRC	WP	MC	IDNF	MCR	ABRT	NM	Obs
Sector Count	Na							
LBA Low	LBA(7:0)							
LBA Mid	LBA(15:8)							
LBA High	LBA(23:16)							
Device	Obs	Na	obs	DEV	LBA(27:24)			
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Error register-

ICRC shall be set to one if an interface CRC error has occurred during an Ultra DMA data transfer. The content of this bit is not applicable for Multiword DMA transfers.

IDNF shall be set to one if a user-accessible address could not be found. **IDNF** shall be set to one if an address outside of the range of user-accessible address is requested if command aborted is not returned.

ABRT shall be set to one if an error, including an ICRC error, has occurred during an Ultra DMA data transfer. **ABRT** shall be set to one if the device is not able to complete the action requested by the command. **ABRT** shall be set to one if an address outside of the range of user-accessible addresses is requested if **IDNF** is not set to one.

LBA Low, LBA Mid, and LBA High, Device

Shall be written with the address of first unrecoverable error.

Status register

BSY will be cleared to zero indicating command completion

DRDY will be set to one.

DF (Device Fault) will be set to one if a device fault has occurred.

DRQ will be cleared to zero

ERR will be set to one if an Error register bit is set to one.

5.1.18.5 Prerequisites

DRDY set to one. The host shall initialize the DMA channel.

5.1.18.6 Description

The Write DMA command allows the host to write data using the DMA data transfer protocol.

5.1.19 Execute Device Diagnostic

5.1.19.1 Command Code

90h

5.1.19.2 Feature Set

General feature set

5.1.19.3 Protocol

Device diagnostic

5.1.19.4 Inputs

Only the command code (90h). All other registers shall be ignored.

Table 65: Execute device diagnostic command for inputs information

Register	7	6	5	4	3	2	1	0
Features	Na							
Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	obs	Na	obs	Na	Na			
Command	90h							

Device –

DEV shall be ignored.

Normal Outputs

The diagnostic code written into the Error register is an 8-bit code.

Table 66: Execute device diagnostic command for normal outputs information

Register	7	6	5	4	3	2	1	0
Error	Diagnostic Code							
Sector Count	Signature

Error register-
 Diagnostic Code
 Sector Count, LBA Low, LBA Mid, LBA High, Device registers
 Device signature
 Device register
 DEV shall be cleared to zero.
 Status register
 TBD

Table 67: Execute device diagnostic command for status register information

Code	Description
01h	Device passed
Others	Device failed

5.1.19.5 Error Outputs

Table 9 shows the error information that is returned as a diagnostic code in the Error register.

5.1.19.6 Prerequisites

This command shall be accepted regardless of the state of DRDY.

5.1.19.7 Description

This command shall cause the devices to perform the internal diagnostic tests.

5.1.20 Read Buffer

5.1.20.1 Command Code

E4h

5.1.20.2 Protocol

PIO data-in

5.1.20.3 Inputs

Table 68: Read Buffer command for inputs information

Register	7	6	5	4	3	2	1	0
Features	Na							
Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	obs	Na	obs	DEV	Na			
Command	E4h							

Device –

DEV shall specify the selected device.

5.1.20.4 Normal Output

Table 69: Read Buffer command for normal output information

Register	7	6	5	4	3	2	1	0
Error	Na							
Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	obs	Na	obs	DEV	Na	Na	Na	Na
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Device register-

DEV shall specify the selected device.

Status register

BSY will be cleared to zero indicating command completion

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ will be cleared to zero

ERR will be cleared to zero.

5.1.20.5 Error Outputs

The device shall return command aborted if the command is not supported.

Table 70: Read Buffer command for error output information

Register	7	6	5	4	3	2	1	0
Error	Na	Na	Na	Na	Na	ABRT	Na	Na
Sector Count	Na							
LBA Low	Na							
LBA Mid	Na							
LBA High	Na							
Device	Obs	Na	obs	DEV	Na			
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Error register-

ABRT shall be set to one if this command is not supported. ABRT may be set to one if the device is not able to complete the action requested by the command.

Device register -

DEV shall indicate the selected device.

Status register

BSY will be cleared to zero indicating command completion

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ will be cleared to zero

ERR will be set to one if an Error register bit is set to one.

5.1.20.6 Prerequisites

DRDY set to one. The command prior to a READ BUFFER command shall be a WRITE BUFFER command.

5.1.20.7 Description

The READ BUFFER command enables the host to read the current contents of the device's sector buffer.

The READ BUFFER and WRITE BUFFER commands shall be synchronized such that sequential WRITE BUFFER and READ BUFFER commands access the same 512 bytes within the buffer.

5.1.21 Write Buffer

5.1.21.1 Command Code

E8h

5.1.21.2

General feature set

- Optional for devices not implementing the PACKET Command feature set.
- Use prohibited for devices implementing the PACKET Command feature set.

5.1.21.3 Protocol

PIO data-out

5.1.21.4 Inputs

Table 71: Write Buffer command for inputs information

LBA Mid	Na							
LBA High	Na							
Device	Obs	Na	obs	DEV	Na			
Status	BSY	DRDY	DF	Na	DRQ	Na	Na	ERR

Error register-

ABRT shall be set to one if this command is not supported. **ABRT** may be set to one if the device is not able to complete the action requested by the command.

Device register -

DEV shall indicate the selected device.

Status register

BSY will be cleared to zero indicating command completion

DRDY will be set to one.

DF (Device Fault) will be cleared to zero.

DRQ will be cleared to zero

ERR will be set to one if an Error register bit is set to one.

5.1.21.7 Prerequisites

DRDY set to one.

5.1.21.8 Description

This command enables the host to write the contents of one sector in the device's buffer.

The READ BUFFER and WRITE BUFFER commands shall be synchronized within the device such that sequential WRITE BUFFER and READ BUFFER commands access the same 512 bytes within the buffer.
