

classic mono LCDs

# **SPECIFICATION** CHARACTER TYPE DOT MATRIX LCD MODULE

ITEM NUMBER: ESTABLISHED DATE: DATASHEET VERSION: FDCC2002D-FLYYBW-51LR 2010.12 2008 VERSION

ISSUED BY: 巍巍东 CHECKED BY: 分本 APPROVED BY: 於

COPYRIGHT © 2000 ~ 2008 FORDATA ELECTRONIC CO., LTD. ALL RIGHTS RESERVED

**FORDATA ELECTRONIC CO.,LTD** STANDARD PROFESSIONAL LCD SUPPLIER FROM CHINA DOC.

DATASHEET STATEMENT

- The following icons are absolutely designed by FORDATA independently in 2007-SEP. They are not in common use in the LCD industry yet but just used for marking out FORDATA products' characteristics quickly and simply without any special meaning. FORDATA reserves the composing right and copyright. No one else is allowed to adopt these icons without FORDATA's approval.
- 2. The ISO9001 logo used in this document is authorized by SGS (www.sgs.com). FORDATA had already successfully passed the strict and professional ISO9001:2000 Quality Management System Certification and got the certificate (No.: CN07/00404)
- 3. The technologies/techniques/crafts which denoted by the following icons are not exclusively owned by FORDATA, but also shared by FORDATA's LCD strategic cooperators, however all these technologies/techniques/crafts have been finally confirmed by FORDATA's professional engineers and QC department.
- 4. As the difference in test standard and test conditions, also FORDATA's insufficient familiarity with the actual LCD using environment, all the referred information in this DATASHEET (including the icons) only have two functions:
  4.1: providing quick reference when you are judging whether or not the product meets your requirements.
  4.2: listing out definitely the tolerance.

**FORDATA declares seriously:** you should first test the corresponding sample(s) before signing the formal FORDATA SAMPLE APPROVAL document rather than consider this DATASHEET as the standard for judging whether or not the LCD meets your requirements. Once you instruct FORDATA to a mass-production without definite demand for providing sample before, FORDATA will disclaim all responsibility if the mass-production is proved not meeting with your requirements.

- 5. The sequence of the icons is random and doesn't indicate the importance grade.
- 6. Icons explanation

FORDATA's 2006 version logo. FORDATA is an integrated manufacturer of flat panel display (FPD). FORDATA supplies TN, HTN, STN, FSTN monochrome LCD panel; COB, COG, TAB LCD module; and all kinds of LED backlight.

# classic mono LCDs

#### FAST RESPONSE TIME

This icon on the cover indicates the product is with high response speed; Otherwise not.

	C	
6		

#### **HIGH CONTRAST**

This icon on the cover indicates the product is with high contrast; Otherwise not.

## WIDE VIEWING SCOPE

This icon on the cover indicates the product is with wide viewing scope; Otherwise not.

# RoHS COMPLIANCE

This icon on the cover indicates the product meets ROHS requirements; Otherwise not.

#### **3TIMEs 100% QC EXAMINATION** This icon on the cover indicates the product

has passed FORDATA's thrice 100% QC. Otherwise not.

#### VIcm = 3.0V

This icon on the cover indicates the product can work at 3.0V exactly; otherwise not.

#### **PROTECTION CIRCUIT**

This icon on the cover indicates the product is with protection circuit; Otherwise not.

#### LONG LIFE VERSION

This icon on the cover indicates the product is long life version (over 9K hours guaranteed); Otherwise not.

#### Anti UV VERSION

This icon on the cover indicates the product is against UV line. Otherwise not.

#### **OPERATION TEMPERATURE RANGE**

This icon on the cover indicates the operating temperature range (X-Y).

#### TWICE SELECTION OF LED MATERIALS

This icon on the cover indicates the LED had passed FORDATA's twice strict selection which promises the product's identical color and brightness; Otherwise not.

N SERIES TECHNOLOGY (2008 developed) FORDATA adopts new structure, new craft, new technology and new materials inside both LCD module and LCD panel to improve the "RainBow"

 PROFESSIONAL LCD SUPPLIER FROM CHINA

 SPEC.
 FDCC2002D-FLYYBW-51LR
 4/20

#### **1. GENERAL SPECIFICATIONS**

ITEM	NOMINAL DIMENSIONS / AVAILABLE OPTIONS
DISPLAY FORMAT	20 Characters by 2 Lines
LCD PANEL OPTIONS	STN (Yellow-green color)
POLARIZER OPTIONS	Positive, Transflective
BACKLIGHT OPTIONS	Array type LED backlight (Yellow-green color)
VIEWING ANGLE OPTIONS	6:00 ( Bottom )
TEMPERATURE RANGE OPTIONS	Wide temp. range (-20°C ~ 70°C )
CONTROLLER IC	SUNPLUS
DISPLAY DUTY	1/16
DRIVING BIAS	1/5

#### 2. MECHANICAL SPECIFICATIONS

OVERALL SIZE	LED backlight v	LED backlight version : 116.0 x 37.0 x max 13.5							
VIEWING AREA	83.0W x 18.6H	mm	HOLE-HOLE	108.0W x 29.0H	mm				
CHARACTER SIZE	3.20W x 5.95H	mm	CHARACTER PITCH	0.50W x 0.40H	mm

#### **11. INSTRUCTION TABLE**

				Inst	ructio	on Co	de				D	Execution
Instruction	RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0	Description	Time(fosc= 270kHz)
Clear Display	0	0	0	0	0	0	0	0	0	1	Write 20H to DDRAM set DDRAM address to 00H from AC	1.52ms
Return Home	0	0	0	0	0	0	0	0	1	-	Set DDRAM address to 00H from AC and return cursor to its original position if shifted. The contents of DDRAM are not changed.	1.52ms
Entry Mode Set	0	0	0	0	0	0	0	1	I/D	SH	Assign cursor moving direction and enable the shift of entire display	38µs
Display ON/OFF Control	0	0	0	0	0	0	1	D	С	В	Set display(D) cursor(C) and blinking of cursor(B) on/off	38µs
Cursor or Display Shift	0	0	0	0	0	1	S/C	R/L	-	-	Set cursor moving and display shift control bit, and the direction, without changing DDRAM data	38µs
Function Set	0	0	0	0	1	DL	N	F	-	-	Set interface data length(DL:8bit/4bit), number of display line (N:2line/1line) and,display font type F:5X11dots / 5X8dots	38µs
Set CGRAM Address	0	0	0	1	AC5	AC4	AC3	AC2	AC1	AC0	Set CGRAM address in address counter	38µs
Set DDRAM Address	0	0	1	AC6	AC5	AC4	AC3	AC2	AC1	AC0	Set DDRAM address in address counter	38µs
Read Busy Flag and Address	0	1	BF	AC6	AC5	AC4	AC3	AC2	AC1	AC0	Whether during internal operation or not can be known by reading BF The contents of address counter can also be read	0 µs
Write Data to RAM	1	0	D7	D6	D5	D4	D3	D2	D1	D0	Write data into internal RAM (DDRAM/CGRAM)	38µs
Read data from RAM	1	1	D7	D6	D5	D4	D3	D2	D1	D0	Read data from internal RAM (DDRAM/CGRAM)	38µs

#### **12. INSTRUCTION DESCRIPTION**

# A. Clear Display

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	0	0	0	0	0	0	1

Clear all the display data by writing 20H (space code) to all DDRAM address, and set DDRAM address to 00H into AC (address counter).

Return cursor to the original status, namely, bring the cursor to the left edge on the first line of the display.

Make the entry mode increment ( I/D = HIGH )

# **B. Return Home**

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	0	0	0	0	0	1	-

Set DDRAM address to 00H into the address counter.

Return cursor to its original site and return display to its original status, if shifted. Contents of DDRAM does not change.

# C. Entry Mode Set

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	0	0	0	0	1	I/D	SH

Set the moving direction of cursor and display.

## I/D:Increment /decrement of DDRAM address(cursor or blink)

I/D=High,cursor/blink moves to right and DDRAM address is increased by 1.

I/D=low,cursor/blink moves to left and DDRAM address is decreased by 1.

\*CGRAM operates the same way as DDRAM, when reading from or writing to CGRAM. **SH:Shift of entire display** 

When DDRAM read (CGRAM read/write) operation or SH=Low,shifting of entire display is not performed.if SH=High, and DDRAM write operation,shift of entire display is performed according to I/D value(I/D=High,shift left, I/D=Low, shift right).

# D. Display ON/OFF Control

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	0	0	0	1	D	С	В

# D:Display ON/OFF control bit

When D=High, entire display is turned on.

When D=Low, display is turned off, but display data remains in DDRAM.

## C:Cursor ON/OFF control bit

When C=High, cursor is turned on.

When C=Low, cursor is disappeared in current display ,but I/D register preserves its data.

## **B:Cursor Blink ON/OFF control bit**

When B=High, cursor blink is on, which performs alternately between all the High data and display characters at the cursor position.

When B=Low ,blink is off.

# E. Cursor or Display Shift

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	0	0	1	S/C	R/L	-	-

Shifting of right/left cursor position or display without writing or reading of display data. This instruction is used to correct or search display data.

During 2-line mode display, cursor moves to the 2<sup>nd</sup> line after the 40<sup>th</sup> digit of the 1<sup>st</sup> line. Note that display shift is performed simultaneously in all the lines.

When displayed data is shifted repeatedly, each line is shifted individually.

When display shift is performed, the contents of the address counter are not changed.

S/C	R/L	Operation
0	0	Shift cursor to the left, AC is decreased by 1
0	1	Shift cursor to the right, AC is increased by 1
1	0	Shift all the display to the left,cursor moves according to the display
1	1	Shift all the display to the right,cursor moves according to the display

#### FORDATA ELECTRONIC CO.,LTD PRODUCT MODE NO. SPEC. **PROFESSIONAL LCD SUPPLIER FROM CHINA** FDCC2002D-FLYYBW-51LR

PAGE 13/20

# F. Function set

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	0	1	DL	N	F	-	-

# DL:Interface data length control bit

When DL=High, it means 8-bit bus mode with MPU.

When DL=Low, it means 4-bit bus mode with MPU.

When 4-bit bus mode, it needs to transfer 4-bit data twice.

# N:Display line number control bit

When N=Low, 1-line display mode is set.

When N=High, 2-line display mode is set.

## F:Display font type control bit

When F=Low, 5x8 dots format display mode is set. When F=High, 5x11 dots format display mode.

# G. Set CGRAM Address

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	1	AC5	AC4	AC3	AC2	AC1	AC0

Set CGRAM address to AC.

This instruction makes CGRAM data available from MPU.

# H. Set DDRAM Address

F	RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
	0	0	1	AC6	AC5	AC4	AC3	AC2	AC1	AC0

Set DDRAM address to AC.

This instruction makes DDRAM data available from MPU.

When 1-line display mode (N=Low), DDRAM address is from 00H to 4FH In 2-line display mode(N=High),DDRAM address in the 1<sup>st</sup> line is from 00H to 27H and DDRAM address in the 2<sup>nd</sup> line is from 40H to 67H

#### FORDATA ELECTRONIC CO..LTD MODE NO. PRODUCT **PROFESSIONAL LCD SUPPLIER FROM CHINA** SPEC. FDCC2002D-FLYYBW-51LR

PAGE 14/20

#### **Read Busy Flag & Address** I.

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
0	1	BF	AC6	AC5	AC4	AC3	AC2	AC1	AC0

This instruction shows whether IC is in internal operation or not.

If BF is High, internal operation is in progress and shall wait until BF is to be Low, which by then the next instruction can be performed. In this instruction you and also read the value of the address counter.

#### Write data to RAM J.

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
1	0	D7	D6	D5	D4	D3	D2	D1	D0

Write binary 8-bit data to DDRAM/CGRAM.

The selection of RAM from DDRAM, and CGRAM, is set by the previous address set instruction(DDRAM address set,CGRAM address set).

RAM set instruction can also determine the AC direction to RAM.

After write operation, the address is automatically increased /decreased by 1, according the entry mode.

# K. Read data from RAM

RS	R/W	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0
1	1	D7	D6	D5	D4	D3	D2	D1	D0

Read binary 8-bit data from DDRAM/CGRAM.

The selection of RAM is set by the previous address set instruction. If the address set instruction of RAM is not performed before this instruction, the data that has been read first is invalid, as the direction of AC is not yet determined. If RAM data is read several times without RAM address instructions set before read operation, the correct RAM data can be obtained from the second. But the first data would be incorrect, as there is no time margin to transfer RAM data.

FORDATA ELECTRONIC CO.,LTD	PRODUCT	MODE NO.	PAGE	45/20
PROFESSIONAL LCD SUPPLIER FROM CHINA	SPEC.	FDCC2002D-FLYYBW-51LR	PAGE	15/20

In case of DDRAM read operation, cursor shift instruction plays the same role as DDRAM address set instruction, it also transfers RAM data to output data register.

After read operation, address counter is automatically increased/decreased by 1 according to the entry mode.

After CGRAM read operation, display shift may not be executed correctly.

Note:In case of RAM write operation,AC is increased/decreased by 1 as in read operation. At this time,AC indicates the next address position, but only the previous data can be read by the read instruction.

#### 14. DISPLAY DATA RAM(DDRAM)

DDRAM stores display data of maximum 80x8 bits(80 characters). DDRAM address is set in the address counter(AC) as a hexadecimal number

## Features

DB0 to DB7

1. Interface to an 8-bit or 4-bit MPU is available.

If Interface Data Is 8-bits Long

Data transfer is made through all 8 bus lines from

2. 192 types of alphanumeric, symbols and special characters can be displayed with the built - in character generator (ROM).

If Interface Data Is 4-bit Long

Data transfer is accomplished through 4 bus lines

from DB4 to DB7.(while the rest of 4 bus lines from

Data transfer is completed when 4-bits of data is transferred twice.(upper 4-bits of data, then lower

DB0 toDB3 are not used.)

4-bits of data.)

- 3. Other preferred characters can be displayed by character generator (RAM).
- 4. Various instructions may be programmed.
  - Clear display
  - Cursor at home
  - On/Off cursor
  - Blink character
  - Shift display
  - Shift cursor
  - Read/Write display data .etc.
- 5. Compact and light weight design which can easily be integrated into end products.
- 6. Single power supply +5V drive (except for extended temperature type).
- 7. Low power consumption.
