VI TELEFILTER Filter specification TFS 433H 1/5

Measurement condition

Ambient temperature: 23 °C Input power level: 0 dBm

Terminating impedance:

Input: 50 Ω Output: 50 Ω

Characteristics

Remark:

The reference level for the relative attenuation a_{rel} of the TFS 433H is the minimum of the pass band attenuation a_{min} . The minimum of the pass band attenuation a_{min} is defined as the insertion loss a_e . The centre frequency f_C is the arithmetic mean value of the upper and lower frequencies at the 3 dB dB filter attenuation level relative to the insertion loss a_e . The nominal frequency f_N is fixed at 433,92 MHz without any tolerance. The given values for the relative attenuation a_{rel} have to be achieved at the frequencies given below even if the centre frequency f_C is shifted due to the temperature coefficient of frequency TC_f in the operating temperature range and due to a production tolerance for the centre frequency f_C .
