Ambient temperature: 23 °C
 Input power level: 0 dBm
 Terminating impedance: *
 Input: 134 Ω || -8 pF
 Output: 218 Ω || -6 pF

Characteristics

Remark:

The reference level for the relative attenuation a_{rel} of the TFS 456W is the minimum of the pass band attenuation. This value is defined as the insertion loss a_e . The nominal frequency f_N is fixed at 456,0 MHz without any tolerance. The values of relative attenuation a_{rel} are guaranteed for the whole operating temperature range. The frequency shift of the filter in the operating temperature range is included in the production tolerance scheme.

*) The terminating impedances depend on parasitics and q-values of matching elements and the board used, and are to be understood as reference values only. Should there be additional questions do not hesitate to ask for an application note or contact our design team.

**) to be particularly specified after the first samples.

***) $\Delta f(\text{Hz}) = TC_f(\text{ppm/K}) \times (T - T_0) \times f_{cat}(\text{MHz})$.
